

Chapter Summary

The preceding chapters in this volume have presented the best available knowledge on the contamination of water sources by low concentrations of arsenic, and some of the technologies and tools available for its mitigation. The objective of this chapter is to apply this knowledge in the development of a strategic framework to help planners and policy makers design effective and sustainable mitigation programmes. The discussion in the chapter draws on the lessons learned over the years in the water supply sector, and introduces institutional and economic factors in the development of this framework. While presenting general information applicable to all instances of arsenic contamination world-wide, the discussion focuses on the specific constraints faced by the poor and isolated rural communities that are most severely affected.

The discussion in the chapter begins with a brief summary of the water supply and quality situation world-wide, a review of arsenic in relation to other water quality issues, including its consequences and global scope. It then presents the following key design principles to be considered in the development arsenic mitigation strategies: inform affected people and other stakeholders in a timely fashion; take immediate steps to determine the extent and seriousness of the problem through testing; prepare separate, but compatible, emergency and long-term programme phases; prioritise reductions in arsenic intake, even if standards are not met immediately; involve all relevant sectors in a coordinated mitigation programme; involve other stakeholders in a multi-partner effort; and recognize uncertainty by using flexible programme designs.

The chapter goes on to present a series of case studies on responses to arsenic contamination of water supplies in middle- and low-income countries. The objective of the case studies is to illustrate the application of design parameters in different geographic and socio-economic contexts. The discussion concludes with a brief review of the key design principals specific to arsenic mitigation programming.

If the dynamics are linear and do not change over time, the classical theory of Lotka 1907 and Leslie 1945 is the central tool of demography. This book addresses the situation when the assumption of constancy is dropped. In many practical situations, a population will display unpredictable variation over time in its vital rates, which must then be described in statistical terms. Most of this book is concerned with the theory of populations which are subject to random temporal changes in their vital rates, although other kinds of variation, e.g. cyclical, are also dealt with. The central questions are: how does temporal variation work its way into a population's future, and how does it affect our interpretation of a population's past? The results here are directed at demographers of humans and at population biologists. The uneven mathematical level is dictated by the material, but the book should be accessible to readers interested in population theory. Readers looking for background or prerequisites will find much of it in Hal Caswell's *Matrix population models: construction, analysis, and interpretation* (Sinauer, 1989). This book is in essence a progress report and is deliberately brief. I hope that it is not mystifying. I have not attempted to be complete about either the history or the subject, although most significant results and methods are presented.

Understanding Elder Abuse in Minority Populations Toshio Tataru, 2021-10-30 First published in 1999, research on elder abuse in the United States has made great strides in recent years. As a result, we have been able to define and discover the causes of elder abuse, design tools to assess the risk of abuse, develop and implement treatment and prevention strategies, and evaluate programs for victims and perpetrators. However, this research has been derived from studies whose subjects were primarily Caucasian. This is not because elder abuse does not take place in minority communities, but rather because researchers wanted first to study the issue in its broadest sense.
