Folk Recipe For Healthy Teas:

Ethnobiology of Uzbekistan Olim K. Khojimatov, Yusufjon Gafforov, Rainer W. Bussmann, 2023-08-25 Natural resources and associated biological diversity provide the basis of livelihood for humans particularly in rural areas and mountain regions around the world. Over centuries indigenous peoples, traditional societies and local communities have developed their own specific knowledge regarding plant use, management and conservation. The history of plant use by humans as food and to treat diverse ailments dates back to ancient civilizations. Even though the advent of allopathic medicine has somehow minimized the role of medicinal plants in favor of synthetic drugs, a number of modern drug discoveries have been based on medicinal plants used by indigenous peoples. Ethnobiology is the burgeoning interdisciplinary scientific field which covers all sorts of interactions between plants and people and Central Asia is recognized as a plant diversity hot spot. The mountains and valleys of this region are rich in unique medicinal and food plant species. Local communities residing in the mountain regions of Central Asia possess unique knowledge of surrounding resources which is the result of many years of interaction with and selection of the most desirable and pervasive plant species present. In this context, this book provides comprehensive information on cross culture variation in the traditional uses of plants, fungi and animal species as food, medicine and for cultural purposes among the diverse communities of Uzbekistan. The key areas of focus include plant diversity in Uzbekistan, cross cultural variation in traditional uses of plant species, high value medicinal and food plant species and threats and conservation status of plant species and traditional knowledge. Walker, Rosalind Caribelle Lifquist, 1950 *Plant and Human Health, Volume 1* Munir Ozturk, Khalid Rehman Hakeem, 2018-10-02 Early anthropological evidence for plant use as medicine is 60 000 years old as reported from the Neanderthal grave in Iraq. The importance of plants as medicine is further supported by archeological evidence from Asia.

and the Middle East Today around 1.4 billion people in South Asia alone have no access to modern health care and rely instead on traditional medicine to alleviate various symptoms. On a global basis approximately 50 to 80 thousand plant species are used either natively or as pharmaceutical derivatives for life threatening conditions that include diabetes, hypertension and cancers. As the demand for plant based medicine rises there is an unmet need to investigate the quality, safety and efficacy of these herbals by the scientific methods. Current research on drug discovery from medicinal plants involves a multifaceted approach combining botanical, phytochemical, analytical and molecular techniques. For instance, high throughput robotic screens have been developed by industry; it is now possible to carry out 50,000 tests per day in the search for compounds which act on a key enzyme or a subset of receptors. This and other bioassays thus offer hope that one may eventually identify compounds for treating a variety of diseases or conditions. However, drug development from natural products is not without its problems. Frequent challenges encountered include the procurement of raw materials, the selection and implementation of appropriate high throughput bioassays and the scaling up of preparative procedures. Research scientists should therefore arm themselves with the right tools and knowledge in order to harness the vast potentials of plant based therapeutics. The main objective of *Plant and Human Health* is to serve as a comprehensive guide for this endeavor. Volume 1 highlights how humans from specific areas or cultures use indigenous plants. Despite technological developments, herbal drugs still occupy a preferential place in a majority of the population in the third world and have slowly taken roots as alternative medicine in the West. The integration of modern science with traditional uses of herbal drugs is important for our understanding of this ethnobotanical relationship. Volume 2 deals with the phytochemical and molecular characterization of herbal medicine. Specifically, it focuses on the secondary metabolic compounds which afford protection against diseases. Lastly, Volume 3 discusses the physiological mechanisms by which the active ingredients of medicinal plants serve to improve human health. Together, this three volume collection intends to bridge the gap for herbalists, traditional and modern medical practitioners and students and researchers in botany and horticulture. **Weekly**
