Gridworld Student Manual:

Java Programming Steven P Warr, 2011-01-31 Learning a programming language on your own can be daunting. Programming books can be confusing and incomplete. Program listings often do not work until you have mucked around using trial and error. I like to use books as reference after I have read them. Invariably none of the books have the particular information that I want nor do they have references to other information sources. *Java Programming What Do You Want To Do* changes all that. Inside there are clear instructions on how to do what you want to do. Basic structures, graphics programming with AWT and NetBeans, Advanced structures, test preparation, networking, cell phone programming and much more.

Transfer Learning for Multiagent Reinforcement Learning Systems Felipe Leno da Silva, Anna Helena Reali Costa, 2021-05-27 Learning to solve sequential decision making tasks is difficult. Humans take years exploring the environment essentially in a random way until they are able to reason, solve difficult tasks and collaborate with other humans towards a common goal. Artificial Intelligent agents are like humans in this aspect. Reinforcement Learning (RL) is a well known technique to train autonomous agents through interactions with the environment. Unfortunately the learning process has a high sample complexity to infer an effective actuation policy especially when multiple agents are simultaneously actuating in the environment. However previous knowledge can be leveraged to accelerate learning and enable solving harder tasks. In the same way humans build skills and reuse them by relating different tasks, RL agents might reuse knowledge from previously solved tasks and from the exchange of knowledge with other agents in the environment. In fact virtually all of the most challenging tasks currently solved by RL rely on embedded knowledge reuse techniques such as Imitation Learning, Learning from Demonstration and Curriculum Learning. This book surveys the literature on knowledge reuse in multiagent RL. The authors define a unifying taxonomy of state of the art solutions for reusing knowledge providing a comprehensive discussion of recent progress in the area. In this book readers will find a comprehensive discussion of the many ways in which knowledge can be reused in multiagent sequential decision making tasks as well as in which scenarios each of the approaches is more efficient. The authors also provide their view of the current low hanging fruit developments of the area as well as the still open big questions that could result in breakthrough developments. Finally the book provides resources to researchers who intend to join this area or leverage those techniques including a list of conferences, journals and implementation tools. This book will be useful for a wide audience and will hopefully promote new dialogues across communities and novel developments in the area.
