Holt Biology Rob DeSalle, Holt Rinehart and Winston, 2008 Holt Biology Student Edition 2008 Neural Machines: A Defense of Non-Representationalism in Cognitive Neuroscience Matej Kohár, 2023-03-09 In this book Matej Kohar demonstrates how the new mechanistic account of explanation can be used to support a non representationalist view of explanations in cognitive neuroscience and therefore can bring new conceptual tools to the non representationalist arsenal Kohar focuses on the explanatory relevance of representational content in constitutive mechanistic explanations typical in cognitive neuroscience The work significantly contributes to two areas of literature 1 the debate between representationalism and non representationalism and 2 the literature on mechanistic explanation Kohar begins with an introduction to the mechanistic theory of explanation focusing on the analysis of mechanistic constitution as the basis of explanatory relevance in constitutive mechanistic explanation He argues that any viable analysis of representational contents implies that content is not constitutively relevant to cognitive phenomena The author also addresses objections against his argument and concludes with an examination of the consequences of his account for both traditional cognitive neuroscience and non representationalist alternatives This book is of interest to readers in philosophy of mind cognitive science and neuroscience *Athletic Enhancement, Human Nature and Ethics* Jan Tolleneer, Sigrid Sterckx, Pieter Bonte, 2012-12-09 The book provides an in depth discussion on the human nature concept from different perspectives and from different disciplines analyzing its use in the doping debate and researching its normative overtones The relation between natural talent and enhanced abilities is scrutinized within a proper conceptual and theoretical framework is doping to be seen as a factor of the athlete's dehumanization or is it a tool to fulfill his/her aspirations to go faster higher and stronger Which characteristics make sports such a peculiar subject of ethical discussion and what are the both intrinsic and extrinsic moral dangers and opportunities involved in athletic enhancement This volume combines fundamental philosophical anthropological reflection with applied ethics and socio cultural and empirical approaches Furthermore guidelines will be presented to decision and policy makers on local national and international levels Zooming in on the intrinsic issue of what is valuable about our homo sapiens biological condition this volume devotes only scant attention to the specific issue of natural talent and why such talent is appreciated so differently than biotechnological origins of ability In addition specific aspects of sports such as its competitive nature and its direct display of bodily prowess provide good reason to single out the issue of natural athletic talent for sustained ethical scrutiny **The Perception of the Environment** Tim Ingold, 2000 An integrated approach to understanding how people live learn work in and perceive their environments The Churchman, 1916 Macrocognition Bryce Huebner, 2014 This book develops a novel approach to distributed cognition and collective intentionality It is argued that collective mentality should only be posited where specialized subroutines are integrated in a way that yields skillful goal directed behaviour that is sensitive to concerns that are relevant to a group as such **Biological & Agricultural**
