Long Term Human-Computer Interaction Richard C. Thomas, 2012-12-06 This book is about longitudinal research in Human Computer Interaction HCI Since the early 1980s much has been understood about the problems of novices learning new systems as well as the performance of expert users However there is still a lot to discover about the transition from novice to expert and its implications for the design of systems For instance How long does it take to become expert Does early experience of a system have any effect on subsequent flexibility How can flexibility and long term learning be promoted Are there strong constraints that should be taken into account in the design of adaptive systems Longitudinal research in HCI has been rare for many reasons There is always pressure to obtain results the current climate of short termism does nothing to promote a longer perspective The field of HCI itself is changing fast and there are often virgin technologies to explore which can be more exciting and potentially profitable than research aimed at basic understanding There is also a possibly mistaken view that longitudinal studies are always inherently expensive The present volume grew out of a project at Sydney University The very first ideas were discussed in 1989 In 1991 data logging started of a mainly undergraduate population using a Unix based editor sam Pike 1987 Due to good fortune the system continued unchanged into a second year and it became clear data collection had very low marginal costs
