Introduction: Teeth and the bones around the mouth give a great deal of information about both a species' diet and how it eats. Take a look at the skull features below.

Question: How do the mouths of hominids compare?

1. **Measure:** As shown at right, place one of the protractor's circles on the top of the zygomatic process. Place the vertex of the protractor at the top of the nasal opening (Hint: You may have to look at the **Front view** in order to see where the top of the nasal opening is in relation to the **orbit**). Place the other circle on the edge of the **maxilla**. The resulting angle is the **maxillary angle**. Complete the table. (Note: You will not be able to do this measurement on incomplete skulls.)

Human Evolution Brian Regal, 2004-11-23 A fascinating and wide ranging look at the controversies surrounding the search for the origins of the human species Written for those new to the subject Human Evolution A Guide to the Debates presents the remarkable history of our understanding of human origins as it developed from the 1800s to the present Most works on this topic focus narrowly on one individual theory or debate In contrast Human Evolution draws from a wide range of sources to offer a fully rounded portrait of the entire field The chapters of the book follow a basic chronological order covering the issues personalities and discoveries that are central to the questions and controversies surrounding human evolution The coverage draws from a wide range of associated topics and examines not only controversies of a religious nature but also those that have little to do with religion allowing readers to weigh the information come to their own conclusions and even begin their own debates Human Evolution George D. Brown, 1995 This work is intended for use with supporting material in an introductory level multidisciplinary college course Its audience are students who are not majoring in one of the sciences directly pertaining to human origins e g biology geology and anthropology This text provides a better understanding of the fundamental aspects of human evolution by placing them in an integrated context with all of nature Pref **Human Evolution** Joseph Benjamin Birdsall, 1975 **The Human Evolution Source Book** Russell L. Ciochon, John G. Fleagle, 1993 M CREATED *Human Evolution*, 1988 Multivariate Statistical Methods in Physical Anthropology G.N. van Vark, W.W. Howells, 2012-12-06 Physical anthropologists like other research workers are recognizing that the standard multivariate statistical techniques of recent decades are in need of refinement and greater precision Increasingly it is felt that more sophisticated methods are called for specifically designed for the materials and problems at issue To this end the editors were asked by organizers of the First Intercongress of the International Union of Anthropological and Ethnological Sciences to develop a symposium on this general subject With the title of this book the symposium was held in Amsterdam on April 23-25 1981 Invited were mathematical statisticians who were known to have an acquaintance with and interest in anthropological problems together with anthropologists and human geneticists who consider multivariate methodology essential for their research This volume constitutes an updated and revised selection from among the papers presented together with a few supplementary papers by authors who were not present but whose work fills out the intended coverage and makes the volume more complete with respect to the state of affairs in the field The papers are devoted both to new methodology and to its practical application Mathematical statisticians may wish to know more about the biological nature and the kinds of materials and samples on which mathematical thinking can be exercised Anthropologists as practitioners may not be fully aware of the possibilities and limitations in particular mathematical models and methods Our purpose has been to bring the two groups together for personal discussions across disciplinary lines as well as within disciplines **The Oxford Companion to Archaeology** Neil Asher Silberman, Alexander A. Bauer, Cornelius

Holtorf, Margarita Díaz-Andreu García, Emma Waterton, 2012 *The Oxford Companion to Archaeology* Brian M.

Fagan, 1996-12-05 When we think of archaeology most of us think first of its many spectacular finds the legendary city of Troy Tutankhamun's golden tomb the three million year old footprints at Laetoli the mile high city at Machu Picchu the cave paintings at Lascaux But as marvelous as these discoveries are the ultimate goal of archaeology and of archaeologists is something far more ambitious Indeed it is one of humanity's great quests to recapture and understand our human past across vast stretches of time as it was lived in every corner of the globe Now in *The Oxford Companion to Archaeology* readers have a comprehensive and authoritative overview of this fascinating discipline in a book that is itself a rare find a treasure of up to date information on virtually every aspect of the field The range of subjects covered here is breathtaking everything from the domestication of the camel to Egyptian hieroglyphics to luminescence dating to the Mayan calendar to Koobi Fora and Olduvai Gorge Readers will find extensive essays that illuminate the full history of archaeology from the discovery of Herculaneum in 1783 to the recent finding of the Ice Man and the ancient city of Uruk and engaging biographies of the great figures in the field from Gertrude Bell Paul Emile Botta and Louis and Mary Leakey to V Gordon Childe Li Chi Heinrich Schliemann and Max Uhle The Companion offers extensive coverage of the methods used in archaeological research revealing how archaeologists find sites remote sensing aerial photography ground survey how they map excavations and report findings and how they analyze artifacts radiocarbon dating dendrochronology stratigraphy mortuary analysis Of course archaeology's great subject is humanity and human culture and there are broad essays that examine human evolution ranging from our early primate ancestors to Australopithecus and Cro Magnon to Homo Erectus and Neanderthals and explore the many general facets of culture from art and architecture to arms and armor to beer and brewing to astronomy and religion And perhaps most important the contributors provide insightful coverage of human culture as it has been expressed in every region of the world Here entries range from broad overviews to treatments of particular themes to discussions of peoples societies and particular sites Thus anyone interested in North America would find articles that cover the continent from the Arctic to the Eastern woodlands to the Northwest Coast that discuss the Iroquois and Algonquian cultures the hunters of the North American plains and the Norse in North America and that describe sites such as Mesa Verde Meadowcroft Rockshelter Serpent Mound and Poverty Point Likewise the coverage of Europe runs from the Paleolithic period to the Bronze and Iron Age to the Post Roman era looks at peoples such as the Celts the Germans the Vikings and the Slavs and describes sites at Altamira Pompeii Stonehenge Terra Amata and dozens of other locales The Companion offers equally thorough coverage of Africa Europe North America Mesoamerica South America Asia the Mediterranean the Near East Australia and the Pacific And finally the editors have included extensive cross referencing and thorough indexing enabling the reader to pursue topics of interest with ease charts and maps providing additional information and bibliographies after most entries directing readers to the best sources for further study Every Oxford Companion aspires to

be the definitive overview of a field of study at a particular moment of time This superb volume is no exception Featuring 700 articles written by hundreds of respected scholars from all over the world The Oxford Companion to Archaeology provides authoritative stimulating entries on everything from bog bodies to underwater archaeology to the Pyramids of Giza and the Valley of the Kings

Evolution of the Human Diet Peter S. Ungar, 2007 We are interested in the evolution of hominin diets for several reasons One is the fundamental concern over our present day eating habits and the consequences of our societal choices such as obesity prevalent in some cultures and starvation in others Another is that humans have learned to feed themselves in extremely varied environments and these adaptations which are fundamentally different from those of our closest biological relatives have to have had historical roots of varying depth The third and the reason why most paleoanthropologists are interested in this question is that a species trophic level and feeding adaptations can have a strong effect on body size locomotion life history strategies geographic range habitat choice and social behavior Diet is key to understanding the ecology and evolution of our distant ancestors and their kin the early hominins A study of the range of foods eaten by our progenitors underscores just how unhealthy many of our diets are today This volume brings together authorities from disparate fields to offer new insights into the diets of our ancestors Paleontologists archaeologists primatologists nutritionists and other researchers all contribute pieces to the puzzle This volume has at its core four main sections Reconstructed diets based on hominin fossils tooth size shape structure wear and chemistry mandibular biomechanics Archaeological evidence of subsistence stone tools and modified bones Models of early hominin diets based on the diets of living primates both human and non human paleoecology and energetics Nutritional analyses and their implications for evolutionary medicine New techniques for gleaned information from fossil teeth bones and stone tools new theories stemming from studies of paleoecology and new models coming from analogy with modern humans and other primates all contribute to our understanding When these approaches are brought together they offer an impressive glimpse into the lives of our distant ancestors The contributions in this volume explore the frontiers of our knowledge in each of these disciplines as they address the knowns the unknowns and the unknowables of the evolution of hominin diets

The Evolution of the Human Head Daniel E. Lieberman, 2011-01-03 In one sense human heads function much like those of other mammals We use them to chew smell swallow think hear and so on But in other respects the human head is quite unusual Unlike other animals even our great ape cousins our heads are short and wide very big brained snoutless largely furless and perched on a short nearly vertical neck Daniel E Lieberman sets out to explain how the human head works and why our heads evolved in this peculiarly human way Exhaustively researched and years in the making this innovative book documents how the many components of the head function how they evolved since we diverged from the apes and how they interact in diverse ways both functionally and developmentally causing them to be highly integrated This integration not only permits the head's many units to accommodate each other as they grow and work but also facilitates evolutionary change Lieberman

shows how when and why the major transformations evident in the evolution of the human head occurred The special way the head is integrated Lieberman argues made it possible for a few developmental shifts to have had widespread effects on craniofacial growth yet still permit the head to function exquisitely This is the first book to explore in depth what happened in human evolution by integrating principles of development and functional morphology with the hominin fossil record The Evolution of the Human Head will permanently change the study of human evolution and has widespread ramifications for thinking about other branches of evolutionary biology Are They Out There?
