

## Chapter 1 Review Guide - Introduction to Anatomy and Physiology

1. Describe the difference between ANATOMY & PHYSIOLOGY
2. Know the levels of organization, from simplest to most complex

Match the term on the left with the proper selection on the right.

- |                   |   |
|-------------------|---|
| _____ 1. Organism | A. Many similar cells that act together to perform a common function.                   |
| _____ 2. Cells    | B. The most complex units that make up the body   |
| _____ 3. Tissue   | C. A group of several different kinds of tissues arranged to perform a special function |
| _____ 4. Organ    | D. Denotes a living thing   |
| _____ 5. Systems  | E. The smallest living units of structure and function in the body                      |

4. Define homeostasis. Know the components of a negative feedback loop and be able to label them on a sample pathway.

**Control center, Target organ, Receptor, Sensory pathway, Efferent Pathway**

5. Describe how negative feedback and positive feedback act to regulate body function.

Ex/ Calcium homeostasis- A rise in blood calcium levels causes a release of a hormone from the thyroid gland. This hormone then promotes Calcium deposition in the bone, removing it from the blood. Is this an example of negative or positive feedback? Could you draw a diagram of this feedback loop?

6. Describe the **body cavities**, what organs are found in each and be able to identify them on a diagram. (See handouts, diagram below, and flow chart notes)

7. Describe the 11 organ systems (MURDERS LINC), their functions, and organs found in each
8. Describe the ANATOMICAL POSITION, know its importance
9. Know the relative directional terms:

**Human Anatomy and Physiology Laboratory Manual I** Gregory Anoufrieu, 2016-01-05 [Lab Manual to accompany McKinley's Anatomy & Physiology Main Version](#) Michael McKinley, Dr., Valerie O'Loughlin, Theresa Bidle, 2021-01-27 Human anatomy and physiology is a complex yet fascinating subject and is perhaps one of the most personal subjects a student will encounter during his or her education It is also a subject that can create concern for students because of the sheer volume of material and the misconception that it is all about memorization The study of human anatomy and physiology really comes to life in the anatomy and physiology laboratory where students get hands on experience with human cadavers and bones classroom models preserved and fresh animal organs histology slides of human tissues and explore the process of scientific discovery through physiology experimentation Yet most students are at a loss regarding how to approach the anatomy and physiology laboratory For example students are often given numerous lists of structures to identify histology slides to view and wet labs to conduct but

are given comparatively little direction regarding how to recognize structures or how to relate what they encounter in the laboratory to the material presented in the lecture. In addition, most laboratory manuals on the market contain little more than material repeated from anatomy and physiology textbooks which provides no real benefit to a student. This laboratory manual takes a very focused approach to the laboratory experience and provides students with tools to make the subject matter more relevant to their own bodies and to the world around them. Rather than providing a recap of material from classroom lectures and the main textbook for the course, this laboratory manual is much more of an interactive workbook for students: a how-to guide to learning human anatomy and physiology through touch, dissection, observation, experimentation, and critical thinking exercises. Students are guided to formulate a hypothesis about each experiment before beginning physiology exercises. Diagrams direct students in how to perform experiments and don't just show the end results. The text is written in a friendly conversational tone to put students at ease as they discover, organize, and understand the material presented in each chapter.
