

Why is Education Important

From the beginning of time, education has brought light to the life of mankind. Even in the darkest times, education has always been a savior and has helped man get rid of the curse of ignorance. Whatever advancement and prosperity mankind has achieved today is all because of education. It is the most powerful tool that has provided man what he could only dream about, be it the dream of exploring space, flying like a bird, or curing fatal diseases; education has made it possible for humans to achieve what they could only aspire for. This essay about the importance of education emphasizes how it has revolutionized human life.

Education has always been at war with social evils that prevail in society; whether it is racial discrimination or gender inequality, it has always been at the forefront of fighting these evils that trouble society. There was a time when humans were sold as slaves in markets and children were buried alive; there were also times when individuals were not allowed at public places just because of the color of their skin. The reason why education is important is that it has elevated humans to the status of being civilized. It has prevented humans from committing heinous crimes and has persuaded them to give up norms and rituals against humanity and promoted brutality. As a result, the civilized nations today are indebted to the vital contribution of education in making this world a far better place to live.

We live in a world that is diverse in terms of cultural and traditional norms. However, our ancestors' beliefs can sometimes wreck a person's life. Some people, for example, are termed cursed from the moment they are born. We've even labeled people as untouchables and stripped them of their basic rights. The illiterate belief in miracles, believing that a single prayer can cause a blind person to see, a deaf person to speak, and a lame person to walk. By believing such misconceptions, they end up wasting money. At such moments, the importance of education cannot be dismissed. Education promotes scientific explanations for the occurrence of all global phenomena. So only educated people can put an end to the existing black market based on manipulated myths about religion.

Through education, children are taught the importance of cleanliness and eating a well-balanced diet in primary schools. They are also educated on the benefits of recycling and reusing. Furthermore, they learn about the scarcity of natural resources and the importance of environmental and nature conservation. Thus, in everyday life, they can make wise decisions. When applied in practice, lessons on living in harmony with nature and maintaining the environment pollution-free could improve the quality of air, water, and soil. It will also improve the environment's visual value, allowing us to attract more tourists. Hence education not only contributes to maintaining hygiene and well-being in the society for its betterment but also, through these activities, support economics, in the long run, ensuring a healthy and prosperous society.

Education can help a community's law and order condition. People are more aware of deceptive methods and have the resolve to confront dishonest individuals. They grow hesitant to accept bribes and avoid falling prey to con artists and crooks. If primary and secondary education could be made free and mandatory, many more youngsters would not commit robbery, rape, or murder. After finishing high school, children who attend universities have a greater chance of finding work and are less likely to turn to crime as a means of surviving. As a result, education is critical in ensuring the safety and security of society.

The progress and prosperity of the world are dependent on education. Hence the world in unity must commit to educating and elevating the menace of ignorance.

The Pursuit of Excellence Through Education Michel Ferrari,2001-12-01 Although specific definitions may change over time few goals are considered more important to education than the pursuit of academic excellence There are many different viewpoints on this issue today among educational psychologists and other social scientists One particularly glaring fault line in the debate divides those who emphasize developing individual learning and those who focus on promoting cultural and institutional reform These two perspectives are rarely addressed in a single volume In this book well known theorists and researchers present a range of perspectives on how to promote excellence in education This allows those who stress transformation of educational practice and those who emphasize individual abilities to speak to each and invites readers to jointly consider the arguments for both positions or for some synthesis of the two The point is to consider how these two divergent viewpoints can be reconciled or simply coordinated in an effort to benefit both students and society at large The main thesis is that excellence can be fostered without sacrificing equity both of which are fundamental tenets of a democratic education The issues addressed in this book have implications and relevance for school reform efforts and across the fields of educational psychology curriculum and instruction philosophy of education and educational leadership The volume provides a unique source for students and teachers in various disciplines who want to gain a broader and more integrated view of the nature and development of excellence through education
