Soviet Researches on Luminescence D. V. Skobel'tsyn, 2013-11-11 It is well known that luminescence is the term used to describe the excess radiation from a body over and above the thermal radiation and persisting for a time which greatly exceeds the period of a light vibration The first half of this definition proposed by Wiedemann distinguishes luminescence from equilibrium thermal radiation the second half introduced by Vavilov distinguishes luminescence from various forms of scattering and from induced radiation such as Vavilov Cherenkov radiation etc Distinctions are made between photo cathode x ray and other forms of luminescence depending on how energy is introduced into the luminescent body Electroluminescence is the name given to that form of fluorescence in which the radiating body receives energy directly from an electric field It should be noted that luminescence under the influence of cathode rays is not called electroluminescence because in this case the necessary energy is not supplied directly from the electric field to the radiating body but by means of extraneous electrons Electroluminescence of gaseous bodies radiation from a gas discharge has been known for a long time and is widely used in luminescent lamps and gas discharge tubes In 1923 Losev observed radiation from silicon carbide crystals when a voltage was applied to them directly **Nuclear Science Abstracts**, 1975 **Chemi- and Bioluminescence**

Burr, 2020-08-18 This book focuses on instrumentation of chemi and bioluminescence and discusses the nature of chemiluminescence as the exothermic oxidation of a substrate organic compound to give an energy rich product that is luminescent It describes the applications of chemiluminescence **Fluorescence Assay in Biology and Medicine** Sidney Udenfriend, 2014-05-27 Molecular Biology An International Series of Monographs and Textbooks Fluorescence Assay in Biology and Medicine Volume II covers the many applications of fluorescence and phosphorescence This book discusses the principles of fluorescence polarization comparison of luminescence methods of analysis and direct measurement of fluorescence decay times The photodecomposition of sulfhydryl compounds determination of primary structure and fluorescent staining are also deliberated This text likewise covers the assay of purines in nucleic acid hydrolyzates formyltetrahydrofolate synthetase and ovarian hormones This volume is valuable to chemists physicists and biophysicists intending to use fluorescence in studying reaction mechanisms and elucidate the structure of complex biopolymers **Science Abstracts**, 1965 A Course in Luminescence Measurements and Analyses for Radiation Dosimetry Stephen W. S.

McKeever, 2022-05-25 A Course in Luminescence Measurements and Analyses for Radiation Dosimetry A complete approach to the three key techniques in luminescence dosimetry In A Course in Luminescence Measurements and Analyses for Radiation Dosimetry expert researcher Stephen McKeever delivers a holistic and comprehensive exploration of the three main luminescence techniques used in radiation dosimetry thermoluminescence optically stimulated luminescence and radiophotoluminescence The author demonstrates how the three techniques are related to one another and how they compare to each other Throughout the author's focus is on pedagogy including state of the art research only where it is

relevant to demonstrate a key principle or where it reveals a critical insight into physical mechanisms The primary purpose of the book is to teach beginning researchers about the three aforementioned techniques their similarities and distinctions and their applications A Course in Luminescence Measurements and Analyses for Radiation Dosimetry offers access to a companion website that includes original data sets and problems to be solved by the reader The book also includes A thorough introduction to the field of luminescence applications in radiation dosimetry including a history of the subject Comprehensive explorations of introductory models and kinetics including the concepts of thermoluminescence optically stimulated luminescence and radiophotoluminescence Practical discussions of luminescence curve shapes including the determination of trapping parameters from experimental thermoluminescence and optically stimulated luminescence data In depth examinations of dose response functions superlinearity supralinearity and sublinearity as well as the causes of non linearity Detailed examples with well known materials A Course in Luminescence Measurements and Analyses for Radiation Dosimetry is an invaluable guide for undergraduate and graduate students in the field of radiation dosimetry as well as faculty and professionals in the field

**Optical Spectroscopy of Inorganic Solids** B. Henderson, G. Frank Imbusch, 2006 This text describes the technique of optical spectroscopy applied to problems in condensed matter physics It relates theoretical understanding to experimental measurement including discussion of the optical spectroscopy of inorganic insulators with many illustrative examples Symmetry arguments are developed from a formal group theoretical basis and are frequently used and a special effort is made to treat the subject of lattice vibrations and to show how these can affect the spectroscopic properties of solids The elements of laser theory are developed and the authors also explore the use of optically detected magnetic resonance techniques for the investigation of semiconducting materials

*The Properties of Optical Glass* Hans Bach, Norbert Neuroth, 2012-12-06 This book entitled The Properties of Optical Glass is one of a series reporting on research and development activities on products and processes conducted by the Schott Group The scientifically founded development of new products and technical processes has traditionally been of vital importance at Schott and has always been performed on a scale determined by the prospects for application of our special glasses The scale has increased enormously since the reconstruction of the Schott Glaswerke in Mainz The range of expert knowledge required for that could never have been supplied by Schott alone It is also a tradition in our company to cultivate collaboration with customers universities and research institutes Publications in numerous technical journals which since 1969 we have edited to a regular timeplan as Forschungsberichte research reports formed the basis of this cooperation They contain up to date information on the most various topics for the expert but are not suited as survey material for those whose standpoint is more remote This is the point where we would like to place our series to stimulate the exchange of thoughts so that we can consider from

different points of view the possibilities offered by those incredibly versatile materials glass and glass ceramics We would like to show scientists and engineers interested customers and friends and employees of our firm the knowledge that has been won through our research and development at Schott in cooperation with the users of our materials      *Measurements of Phosphor Properties* William M. Yen, Shigeo (deceased) Shionoya, Hajime Yamamoto, 2018-10-08 Measuring the properties of phosphors is an essential step in developing and selecting phosphors for specific applications Consisting of chapters drawn from the second edition of the best selling Handbook of Phosphors Measurements of Phosphor Properties outlines various methods for characterizing and measuring the optical and luminescence properties of phosphors The book covers measurement in the vacuum ultraviolet region measurement of particle size and optical properties of phosphor powders and relevant aspects of color vision in the human eye It details the optical properties of powder layers color vision and other miscellanies It concludes with a detailed history of phosphor technology and industry      **Nanostructured and Advanced**

**Materials for Applications in Sensor, Optoelectronic and Photovoltaic Technology** Ashok K. Vaseashta, D. Dimova-Malinovska, J.M. Marshall, 2007-04-29 The principal aim of this NATO Advanced Study Institute ASI Nanostructured and Advanced Materials for Applications in Sensor Optoelectronic and Photovoltaic Technology was to present a contemporary overview of the field of nanostructured and advanced electronic materials Nanotechnology is an emerging scientific field receiving significant worldwide attention On a nanometer scale materials or structures may possess new and unique physical properties Some of these are now known to the scientific community but there may well be many properties not yet known to us rendering it as a fascinating area of research and a suitable subject for a NATO ASI Yet another aspect of the field is the possibility for creating meta stable phases with unconventional properties and the ultra miniaturization of current devices sensors and machines Such nanotechnological and related advanced materials have an extremely wide range of potential applications viz nanoscale electronics sensors optoelectronics photonics nano biological systems na medicine energy storage systems etc This is a wide ranging subject area and therefore requires the formation of multi disciplinary teams of physicists chemists materials scientists engineers molecular biologists pharmacologists and others to work together on the synthesis and processing of materials and structures the understanding of their physical properties the design and fabrication of devices etc Hence in formulating our ASI we adopted an int disciplinary approach bringing together recognised experts in the various fields while retaining a level of treatment accessible to those active in specific individual areas of research and development      Practical Fluorescence, Second Edition George G. Guilbault, 2020-08-26 This is a new edition first 1973 of an introduction to the principles and applications of all phases of luminescence spectroscopy Contains all rewritten chapters on general aspects of luminescence instrumentation effects of molecular structure and environment inorganic analysis and phosphorescence The second edition also introduces new topics such as process applications bioprocess monitoring and biotechnology methods solid surface luminescence and pesticide analysis providing expanded

coverage on chemiluminescence and environmental analysis and updates information on equipment supplies newer references and more

**Laser Crystals** Alexander A. Kaminskii, 2013-06-29 It was a greatest pleasure for me to learn that Springer Verlag wished to produce a second edition of my book In this connection Dr H Lotsch asked me to send him a list of misprints mistakes and inaccuracies that had been noticed in the first edition and to make corresponding corrections without disturbing the layout or the typography too much I accepted this opportunity with alacrity and moreover found some free places in the text where I was able to insert some concise up to date information about new lasing compounds and stimulated emission channels It was also possible to increase the number of reference citations The reader of the second edition hence has access to more complete data on insulating laser crystals However sections on laser crystal physics have not been updated because a satisfactory description of the progress made in the last ten years in this field would have required the sections to be extended enormously or even a new book to be written Moscow July 1989 ALEXANDER A KAMINSKII Preface to the First Edition The greatest reward for an author is the feeling of satisfaction he gets when it becomes clear to him that readers find his work useful After my book appeared in the USSR in 1975 I received many letters from fellow physicists including colleagues from Western European countries and the USA

*Thermoluminescence* Ernest E. Angino, Richard McCall, 1965

**Feldspar Minerals** J.V. Smith, 2013-06-29 During the past two centuries crystallography mineralogy and petrology have evolved from simple compilations of data to powerful disciplines based on interlocking networks of laws hypotheses and rules of thumb While many data still consist of isolated facts which defy synthesis a gratifying portion can be organized according to physical and chemical principles Unfortunately the separation of physical sciences into subdivisions especially at the teaching level makes it difficult to integrate the different approaches to minerals This separation is worsened by the increasing technical demands of chemical and physical theories by the number and complexity of experimental methods by the sheer mass of facts in an observational discipline such as mineralogy or petrology and by the explosion of papers This book concentrates on those aspects of the genesis and properties of feldspar minerals which can be related to physical and chemical principles My main aim is frankly pedagogic I wish to show how chemical and physical principles can be combined with geologic observation to produce an enhanced level of understanding of the genesis of minerals The feldspars which demonstrate almost all of the general principles provide the most suitable example

Laser Crystals A. A. Kaminskii, 2013-12-19 The greatest reward for an author is the feeling of satisfaction he gets when it becomes clear to him that readers find his work useful After my book appeared in the USSR in 1975 I received many letters from fellow physicists including colleagues from Western European countries and the USA Some of those letters as well as official reviews of the book made specific suggestions for improving the book The satisfaction I derived from all those kind and warm responses gave me the determination to continue work on the book in order to fulfill these wishes in the next edition This possibility arose when one of the scientific editors from Springer Verlag Heidelberg H Latsch who is the founder of the

well known series of quasi monographs Topics in Applied Physics visited our Institute and suggested an English edition of my book For all this and for his subsequent help I am sincerely thankful I consider it my pleasant duty also to express my gratitude to the American physicist H F Ivey who served as scientific editor of the translation The English version of the book retains the structure of the Russian edition though it is supplemented with many new data in the tables and figures It reflects trends in the development of the physics and spectroscopy of laser crystals in recent years     *Handbook of Electroluminescent Materials* D. R. Vij,2004-06-01 An electroluminescent EL material is one that emits electromagnetic EM radiation in the visible or near visible range when an electric field is applied to it EL materials have a vast array of applications in the illumination and displays industries from cheap and energy efficient lighting to large high resolution flat panel displays     *An Assessment and Annotated Bibliography of Marine Bioluminescence Research: 1979-1987* Richard V. Lynch,1993 Publications relevant to marine bioluminescence from 1979 through 1987 are annotated and cross indexed by author organism studied geographic location and key words Sources of research funding are discussed and the most prolific institutions and most popular sources for publication are identified Six areas of particular interest namely flash characteristics stimulation techniques geographic and temporal distribution and occurrence and correlation with environmental parameters the luminous organism themselves symbiosis and circadian rhythms are identified and analyzed for significant progress important research omissions and trends No significant trends are identified although the suggestion of the possibility of a decrease in research effort in these areas over the decade is noted The international nature of the research is considered Bioluminescence Marine biology Optical properties     **Dielectrics** ,1964

The Enthralling World of E-book Books: A Thorough Guide Revealing the Benefits of Kindle Books: A Realm of Convenience and Flexibility E-book books, with their inherent mobility and simplicity of access, have liberated readers from the limitations of hardcopy books.
