SME Technical Paper Society of Manufacturing Engineers, 2002 Advanced Machining Processes of Metallic Materials Wit Grzesik, 2008-01-22 Advanced Machining Processes of Metallic Materials updates our knowledge on the metal cutting processes in relation to theory and industrial practice. In particular, many topics reflect recent developments, e.g., modern tool materials, computational machining, computer simulation of various process phenomena, chip control, monitoring of the cutting state, progressive and hybrid machining operations, and generation and modelling of surface integrity. This book addresses the present state and future development of machining technologies. It provides a comprehensive description of metal cutting theory, experimental and modelling techniques, along with basic machining processes and their effective use in a wide range of manufacturing applications. Topics covered include fundamental physical phenomena and methods for their evaluation, available technology of machining processes for specific classes of materials, and surface integrity. The book also provides strategies for optimization techniques and assessment of machinability. Moreover, it describes topics not currently covered in other sources, such as high performance and multitasking, complete machining with a high potential for increasing productivity, and virtual and e machining. The research covered here has contributed to a more generalized vision of machining technology, including not only traditional manufacturing tasks but also new potential emerging applications, such as micro and nanotechnology. Many practical examples of modern machining technology are applicable for various technical, engineering, and scientific levels. Collects together 20 years of research in the field and related technical information.

Kochan, 2012-12-06 Developments in Computer Integrated Manufacturing arose from the joint work of members of the IFIP Working Group 5.3 Discrete Manufacturing and other IFIP members. Within the Technical Committee 5 of the International Federation of Information Processing (IFIP), the aim of this Working Group is the advancement of computers and their application to the field of discrete part manufacturing. Capabilities will be expanded in the general areas of planning, selection and control of manufacturing equipment and systems. Tools for problem solution include mathematics, geometry, algorithms, computer techniques, and manufacturing technology. This technology will influence many industries: machine tool, automation, aircraft, appliance, and electronics, to name but a few. The Working Group undertook the following specific tasks: 1. To maintain liaison with other national and international organizations working in the same field, cooperating with them whenever desirable to further the common goal. 2. To be responsible for the IFIP's work in organizing and presenting the PRO LAMAT Conferences. 3. To conduct other working conferences and symposia as deemed appropriate in furthering its mission. 4. To develop and sponsor research and industrial and social studies into the various aspects of its mission. The book can be regarded as an attempt to underline the main aspects of technology from the point of view of its software and hardware realization. Because of limitations in size and the availability of literature, the problems of robotics and quality control are not described in detail.

Theory and Design of CNC Systems Suk-Hwan Suh, Seong Kyoon Kang, Dae-Hyuk Chung, Ian Stroud, 2008-08-22 Computer Numerical Control (CNC) controllers are high value added products counting for over 30% of the price of machine tools. The development of CNC technology depends on the integration of technologies from many different industries and requires strategic long term support. Theory and Design of CNC Systems covers the elements of control, the design of control systems, and modern open architecture control systems. Topics covered include Numerical Control Kernel (NCK) design of CNC, Programmable Logic Control (PLC), and the Man Machine Interface (MMI), as well as the major modules for the development of conversational programming methods. The concepts and primary elements of STEP-NC are also introduced. A collaboration of several authors with considerable experience in CNC development, education, and research, this highly focused textbook on the principles and development technologies of CNC controllers can also be used as a guide for those working on CNC development in industry.
