It offers a systems perspective on designing, managing and improving manufacturing operations. On each topic it covers the key issues with pointers on where to dig deeper. Unlike the many textbooks on operations management, supply chain management and process technology, this book weaves together these threads as they interact in manufacturing. It has five parts: Getting to Know Manufacturing, Fundamental concepts of manufacturing as an economic activity, from manufacturing strategy to forecasting market demand, Engineering the Factory, Physical design of factories and processes, the necessary infrastructure and technology for manufacturing, Making Information Flow, The central nervous system that triggers and responds to events occurring in production, Making Materials Flow, The logistics of manufacturing from materials handling inside the factory via warehousing to supply chain management, Enhancing Performance, Managing manufacturing performance and methods to maintain and improve it both in times of normal operations and emergencies. Supported with rich illustrations and teaching aids, Introduction to Manufacturing is essential reading for industrial engineering and management students of all ages and backgrounds engaged in the vital task of making the things we all use.

The main goal of AIMS is to look beyond borders and to stimulate the exchange of ideas across different communities and among PhD students. AIMS 2010 collocated the International Summer School in Network and Service Management ISSNSM 2010. This unique summer school offers hands-on learning experiences in network and service management topics which requires attendees to work in practical on-site courses combined with preceding short tutorial-like teaching sessions. AIMS 2010 which took place during June 23-25, 2010 in Zurich, Switzerland and was hosted by the Communication Systems Group (CSG) Department of Informatics (IFI) of the University of Zurich (UZH) followed the already established tradition of an unusually vivid and interactive conference series in terms of the fourth conference after successful instantiations in Oslo, Norway, 2007.

Bremen Germany 2008 and Enschede The Netherlands 2009 AIMS 2010 focused especially on autonomous management aspects of modern networks and their services The set of mechanisms peer to peer based schemes scalability aspects and autonomous approaches are of major interest In particular the design monitoring management and protection of networked systems in an efficient secure and autonomic manner are key to commercially viable and successful networks and services
