Centrifugal Separation Process

Asst.Prof.Dr. Sirirat Wacharawichanant

Department of Chemical Engineering
Faculty of Engineering and Industrial Technology

Introduction to Centrifugal Separation

1. Separation of particles from a fluid by centrifugal forces acting on the particles.
2. Use of centrifugal increases the forces on particles, hence particles will not settle readily by gravity settler can be separated from fluids by centrifugal force.
3. The high settling force can be obtained with much smaller particles than in gravity settlers.
4. These high centrifugal forces do not change the relative settling velocities of small particles, but these forces do overcome the disturbing effects of Brownian motion.

Centrifugal Filtration

1. Centrifugal are also in centrifugal filtration, where a centrifugal forces is used instead of a pressure difference to cause the flow of slurry in a filter where a cake of solids builds up on a screen.
2. The cake of granular solids from the slurry is deposited on a filter medium held in a rotating basket, washed and dry.

Forces Developed in Centrifugal Separation

1. Centrifugal separators make use of the common principle that an object whirled about an axis or center point at a constant radial distance from the point is acted on by a force.
2. The object being whirled about an axis is constantly changing direction and is thus accelerating, even though the rotational speed is constant.
3. This centripetal force acts in a direction toward the center of rotation.

Forces Developed in Centrifugal Separation

(Continued)

1. If the object being rotated is a cylindrical container, the contents of fluid and solids exert an equal and opposite force, called **centrifugal force**, outward to the walls of the container.
2. This is the force that causes settling or sedimentation of particles through a layer of liquid or filtration of a liquid through a bed of filter cake inside a perforated rotating chamber.
3. The liquid and solids are acted upon by the vertical gravitational force and horizontal centrifugal force. Centrifugal force is so large that force of gravity may be neglected.

Equations for Centrifugal Force

1. In circular motion the acceleration due to the centrifugal force is

$$a_c = \omega^2 r \quad (8-1)$$
2. The centrifugal force F_c in N acting on the particles is given by

Equations for Centrifugal Force

(Continued)

1. Since $\omega = v/r$, where v is tangential velocity of the particle in m/s,

$$F_c = m \omega^2 r = m \left(\frac{v}{r} \right)^2 r = \frac{mv^2}{r} \quad (8-2)$$
2. Often rotational speeds are given as N rev/min and
