**Graphing Culture Change in North American Archaeology** R. Lee Lyman, 2021-06-10 Documentation analysis and explanation of culture change have long been goals of archaeology Scientific graphs facilitate the visual thinking that allow archaeologists to determine the relationship between variables and if well designed comprehend the processes implied by the relationship Different graph types suggest different ontologies and theories of change and particular techniques of parsing temporally continuous morphological variation of artefacts into types influence graph form North American archaeologists have grappled with finding a graph that effectively and efficiently displays culture change over time Line graphs bar graphs and numerous one off graph types were used

between 1910 and 1950 after which spindle graphs displaying temporal frequency distributions of specimens within each of multiple artefact types emerged as the most readily deciphered diagram The variety of graph types used over the twentieth century indicate archaeologists often mixed elements of both Darwinian variational evolutionary change and Midas touch like transformational change Today there is minimal discussion of graph theory or graph grammar in introductory archaeology textbooks or advanced texts and elements of the two theories of evolution are still mixed Culture has changed and archaeology provides unique access to the totality of humankind s cultural past It is therefore crucial that graph theory construction and decipherment are revived in archaeological discussion     Applied Mechanics and Manufacturing

People have a collection of wants and needs and a significant proportion of them are to do with their requirements for mobility. The authors show how creative designers can take a user-focused approach for a wide range of types of transport products and systems. In so doing their starting point is one of creative dissatisfaction with what is currently available and their specialist capability is in imagining and developing new solutions which respond to that opportunity. How this is tackled varies depending on the context and the variety of solutions produced reflects the different aspirations and needs of the people they are designing for. The chapters cover user needs and transport design and the transport system, transport design case studies and the case for the automobile. A conclusion briefly signals what the future for transport design might be. Lavishly illustrated throughout in four colour. Design for Transport is an imaginative and rigorous guide to how designers can take a user-centred and socially responsible approach to tackling a range of types of transport from systems to products and from bicycles to automobiles demonstrating a rich array of solutions through case studies      Partnership for a New Generation of Vehicles (PNGV) United States.
