Animating the Science Fiction Imagination J. P. Telotte, 2018 From twentieth century animations and comic strips to advertising *Animating the Science Fiction Imagination* unearths a significant body of cartoon science fiction from the pre World War II era that appeared at approximately the same time the genre was itself struggling to find an identity an audience and even a name Seeds, Science, and Struggle Abby Kinchy, 2012-07-20 An examination of how advocates for alternative

agriculture confront science based regulation of genetically engineered crops Genetic engineering has a wide range of cultural economic and ethical implications yet it has become almost an article of faith that regulatory decisions about biotechnology be based only on evidence of specific quantifiable risks to consider anything else is said to politicize regulation

In this study of social protest against genetically engineered food Abby Kinchy turns the conventional argument on its head. Rather than consider politicization of the regulatory system she takes a close look at the scientization of public debate about the contamination of crops resulting from pollen drift and seed mixing. Advocates of alternative agriculture confront the scientization of this debate by calling on international experts carrying out their own research questioning regulatory science in court, building alternative markets and demanding that their governments consider the social and economic impacts of the new technologies. Kinchy focuses on social conflicts over canola in Canada and maize in Mexico, drawing out their linkages to the global food system and international environmental governance. The book ultimately demonstrates the shortcomings of dominant models of scientific risk governance which marginalize alternative visions of rural livelihoods and sustainable food production.

Disenchanted Realists, Second Edition Raymond Seidelman, 2015-04-15. When it first appeared three decades ago, Raymond Seidelman's provocative study of the history of political science both attracted a great deal of attention and generated vibrant controversy. Where prior studies of the history of political science had concentrated on the evolution of the scientific study of politics, Seidelman placed his focus on the tenuous relationship between the scientific study of politics and the real world of American democracy. Examining paired sets of political science luminaries over a century, he finds recurrent hopes that a science of politics can be a science for politics and recurrent frustrations that neither elites nor democratic publics respond to the findings of political science or defer to its claims of scientific authority. Analyzing the reasons for political science's limited impact on democratic reform, Seidelman raises the prospect that the progressive dreams of American political science, rising and falling over the course of a century, may finally be exhausted. For this new edition, Bruce Miroff and Stephen Skowronek have written a foreword that relates the genesis of the book and the career of the late Ray Seidelman, while James Farr, a distinguished scholar of political science history, has contributed an extensive afterword. Whether readers concur with or dispute Seidelman's conclusions about the practical significance of political science, they will be challenged by the scope and power of *Disenchanted Realists*. The book invites a new generation of political scientists to examine the problematic development of the discipline they practice and to reflect on the public meanings of what they do in their own careers.

Movies, Modernism, and the Science Fiction Pulp J. P. Telotte, 2019-07-11. This book examines the impact that the new art of film had on another new form, science fiction, especially as it was embodied in the various pulp magazines where the genre first began to establish its identity and key themes. It argues that a film consciousness helped shape even define 20th century science fiction.
