A Small Home of Your Own Dennis Fukai,2010-02-02 Waiting for Robots Antonio A. Casilli,2025-01-08 An essential investigation that pulls back the curtain on automation like AI to show human workers hidden labor Artificial Intelligence fuels both enthusiasm and panic Technologists are inclined to give their

creations leeway pretend they're animated beings and consider them efficient. As users, we may complain when these technologies don't obey or worry about their influence on our choices and our livelihoods. And yet we also yearn for their convenience, see ourselves reflected in them, and treat them as something entirely new. But when we overestimate the automation of these tools, award-winning author Antonio Casilli argues we fail to recognize how our fellow humans are essential to their efficiency. The danger is not that robots will take our jobs but that humans will have to do theirs. In this bracing and powerful book, Casilli uses up-to-the-minute research to show how today's technologies, including AI, continue to exploit human labor, even ours. He connects the diverse activities of today's tech laborers, platform workers like Uber drivers and Airbnb hosts, micro workers including those performing atomized tasks like data entry on Amazon Mechanical Turk, and the rest of us as we evaluate text or images to show we're not robots: react to Facebook posts or approve or improve the output of generative AI. As Casilli shows us, algorithms, search engines, and voice assistants wouldn't function without unpaid or underpaid human contributions. Further, he warns that if we fail to recognize this human work, we risk a dark future for all human labor. *Waiting for Robots* urges us to move beyond the simplistic notion that machines are intelligent and autonomous. As the proverbial Godot, robots are the bearers of a messianic promise that is always postponed. Instead of bringing prosperity for all, they discipline the workforce so we don't dream of a world without drudgery and exploitation. Casilli's eye-opening book makes clear that most automation requires human labor and likely always will, shedding new light on today's consequences and tomorrow's threats of failing to recognize and compensate the click workers of today.

Cartography and Art William Cartwright, Georg Gartner, Antje Lehn, 2009-02-26 This book is the fruition of work from contributors to the Art and Cartography Cartography and Art symposium held in Vienna in February 2008. This meeting brought together cartographers who were interested in the design and aesthetics elements of cartography and artists who use maps as the basis for their art or who incorporate place and space in their expressions. The outcome of bringing together these like minds culminated in a wonderful event spanning three evenings and two days in the Austrian capital. Papers, exhibitions, and installations provided a forum for appreciating the endeavors of artists and cartographers and their representations of geography. As well as indulging in an expansive and expressive occasion, attendees were able to reflect on their own work and discuss similar elements in each other's work. It also allowed cartographers and artists to discuss the potential for collaboration in future research and development. To recognize the significance of this event, paper authors were invited to further develop their work and contribute chapters to this book. We believe that this book marks both a significant occasion in Vienna and a starting point for future collaborative efforts between artists and cartographers. The editors would like to acknowledge the work of Manuela Schmidt and Felix Ortig, who undertook the task of the design and layout of the chapters.
