*Perspectives on Conceptual Change* Barbara J. Guzzetti, Cynthia R. Hynd, 2013-12-16 Perspectives on Conceptual Change

presents case study excerpts illustrating the influence on and processes of students conceptual change and analyses of these cases from multiple theoretical frameworks Researchers in reading education have been investigating conceptual change and the effects of students prior knowledge on their learning for more than a decade During this time this research had been changing from the general and cognitive average effects of interventions on groups of students to the specific and personal individuals reactions to and conceptual change with text structures Studies in this area have begun to focus on the social contextual and affective influences on conceptual change These studies have potential to be informed by other discourses Hence this book shows the results of sharing data in the form of case study excerpts with researchers representing varying perspectives of analyses Instances of learning are examined from cross disciplinary views Case study authors in turn respond to the case analyses The result is a text that provides multiple insights into understanding the learning process and the conditions that impact learning

**Learning Bio-Micro-Nanotechnology** Mel I. Mendelson, 2013-01-04 Learning Bio Micro Nanotechnology is a primer on micro nanotechnology that teaches the vocabulary fundamental concepts and applications of micro nanotechnology in biology chemistry physics engineering electronics computers biomedicine microscopy ethics and risks to humankind It provides an introduction into the small world with a low fog index emphasizing the concepts using analogies and illustrations to simplify the non observables The chapters have many thinking exercises and summaries with references at the end of each chapter The questions at the end are divided into Bloom s taxonomy of learning skills and also include team exercises and methods to assess learning There are many calculations using dimensional analysis according to first principles but the math is purposely kept at a low level and is used as a means of understanding the concepts The appendices provide a math review and a glossary of terms Carefully designed as an easy to read textbook and a practical reference this book emphasizes learning micro nanotechnology vocabulary concepts and applications from first principles and from a multi disciplinary point of view This makes it suitable for one and two semester courses as well as a reference for professionals in the field

Handbook of Creativity John A. Glover, Royce R. Ronning, Cecil R. Reynolds, 2013-03-09 The motivation underlying our development of a handbook of creativity was different from what usually is described by editors of other such volumes Our sense that a handbook was needed sprang not from a deluge of highly erudite studies calling out for organization nor did it stem from a belief that the field had become so fully articulated that such a book was necessary to provide summation and reference Instead this handbook was conceptualized as an attempt to provide structure and organization for a field of study that from our perspective had come to be a large scale example of a degenerating research

program see Brown Chapter 1 The handbook grew out of a series of discussions that spanned several years At the heart of most of our interactions was a profound unhappiness with the state of research on creativity Our consensus was that the number of good works published on creativity each year was small and growing smaller Further we could not point to a journal text or professional organization that was providing leadership for the field in shaping a scientifically sound framework for the development of research programs in creativity At the same time we were casting about for a means of honoring a dear friend E Paul Torrance Our decision was that we might best be able to honor Paul and influence research on creativity by developing a handbook designed to challenge traditional perspectives while offering research agendas based on contemporary psychological views *Innovative Curriculum Materials* ,1999 ENC Focus ,1994 Conceptual Physical Science Paul G.
