Understanding Information Systems Lee Ratzan,2004 In a world awash in data information systems help provide structure and access to information Since libraries build manage and maintain information systems librarians and LIS students are often propelled onto the front lines of interactions between library users and technology But what do librarians

need to know to best meet their patron's needs. What exactly are information systems and how do they work? Information expert Ratzan uses plain language, humor, and everyday examples like baseball and arithmetic to make sense of information systems, computer hardware, software, databases, the Internet. He also explores their characteristics, uses, abuses, advantages, and shortcomings for your library. Fun exercises and appendixes are provided to illustrate key points in the book and measure understanding. You can be a technophobe and still learn about systems and subsystems to represent, organize, retrieve, network, secure, conceal, measure, and manage information. This basic introduction addresses both theoretical and practical issues, including:

- What questions to ask technology vendors to meet your library's needs
- When technology may not be the solution to a problem

Secrets *The Millennium Secret* David Tolfree, 2022-10-13. This fast-moving political thriller of conspiracy and betrayal set in a historical context takes the reader back from the late 1990s to the political upheavals in the 1930s that led to the Second World War and the momentous 1945 Manhattan Project at Los Alamos in the US. *Cobalt* Paula Johanson, 2008-01-15. Cobalt Co. was discovered by Swedish chemist Georg Brandt in 1735. Readers learn that cobalt is a transition metal and that it is ferromagnetic. Only cobalt, nickel, and iron, and some of their alloys, can permanently align their atoms and become a permanent magnet. Cobalt can be found in rocky ores in Africa and Canada. It is very active chemically and forms many compounds, including cobaltous and cobaltic salts. Cobalt is used as a coloring agent in paints, glass, ceramics, and enamels. A radioactive isotope of cobalt called cobalt-60 can be used as a tracer in industry to show where pipes are leaking and in medicine by doctors as a radioactive dye to trace out a person's blood vessels in part or all of a person's body in helping them to diagnose many kinds of illness. *Information Hiding* Fabien A. P. Petitcolas, 2003-07-01. These post-proceedings contain 27 papers that were accepted for presentation at the Fifth International Workshop on Information Hiding held 7-9 October 2002 in Noordwijkerhout, The Netherlands. The papers were selected from 78 submissions on the basis of their scientific excellence and novelty by the program committee. We tried to have a balanced program covering several aspects of information hiding. The program committee was composed of Ross J. Anderson (University of Cambridge, UK), Jan Camenisch (IBM Zurich Research Laboratory, Switzerland), Ingemar J. Cox (NEC Research Institute, USA), John McHugh (SEI CERT, USA), Ira S. Moskowitz (Naval Research Laboratory, USA), Job Oostveen (Philips Research, The Netherlands), Andreas P. Tzschumm (Dresden University of Technology, Germany), Mike Reiter (Carnegie Mellon University, USA), and me. We all wish to thank all the authors of submissions for offering their papers for consideration. This year, contrary to the four previous workshops, the call for papers requested anonymous submissions. However, anonymity was not compulsory, and we did accept some papers in which the identity of the authors was clear. Each submission was assigned to three members of the program committee. Papers submitted by program committee members were assigned to four reviewers. The program committee relied on the advice of outside colleagues. We also insisted that 12 of the 27 accepted papers should be revised according to the comments of the reviewers.
