High James Corner Field Operations:

Dense + Green Thomas Schröpfer, 2015-12-14 The integration of nature in architecture is a key concern of sustainability. However, all too often sustainable design is reduced to improving the energetic performance of buildings and the ornamental application of natural green. Dense Green explores new architectural typologies that emerge from the integration of green components such as sky terraces, vertical parks, and green facades in high density buildings. The book describes green strategies in a comparison across different design tasks and climate conditions. In depth case studies on the most relevant building types consistently presented with analytical drawings made exclusively for this book are complemented by expert essays that demonstrate the current paradigm shift in the sustainable urban environment. From the Contents: Dense Green Building Types by Thomas Schröpfer, architect, Singapore University of Technology and Design; Dense Green Building Technology by Atelier Ten, environmental design consultants and building services engineers, New York, NY; Dense Green Landscape Design by Herbert Dreiseitl, landscape architect, Atelier Dreiseitl, Ramboll Liveable Cities Lab, Berlin; Singapore, Portland, OR; Dense Green Botanical Design by Jean Yong, plant eco-physiologist, Singapore University of Technology and Design; Dense Green Urbanism by Kees Christiaanse, urban planner, ETH Zurich; 25 in depth case studies from Europe, Asia, and the USA; Practice Reports by Foster Partners, WOHA, Ken Yeang, MVRDV, and others. *The Return of Nature* Preston Cohen, Erika Naginski, 2014-07-09 The Return of Nature asks you to critique your conception of nature and your approach to architectural sustainability and green design. What do the terms mean? Are they de facto design requirements? Or are they unintended design replacements? The book is divided into five parts giving you multiple viewpoints on the role of the relations between architecture, nature, technology, and culture. A detailed case study of a built project concludes each part to help you translate theory into practice. This holistic approach will allow you to formulate your own theory and to adjust your practice based on your findings. Will you provoke change? design architecture that responds to change, or both? Coedited by an architect and a historian, the book features new essays by Robert Levit, Catherine Ingraham, Sylvia Lavin, Barry Bergdoll, K. Michael Hays, Diane Lewis, Andrew Payne, Mark Jarzombek, Jean-François Chevrier, Elizabeth Diller, Antoine Picon, and Jorge Silvetti. Five case studies document the work of MOS Architects, Michael Bell Architecture, Steven Holl Architects, George L. Legendre, and Preston Scott Cohen. **Into the Great Wide Open** Andreas Rumpfhuber, 2017-12-04 Into the Great Wide Open is a book about a search for a form of practice in architecture. Practice here is understood both as a critical reflection of a status quo and its history as well as forms of active intervention through designing and planning. The book is a fragmentary snapshot of an on-going, constantly developing and altering process to find a place in the production and reflection of our built environment and implicitly disputes the question: What is to be done? **Not For Tourists Guide to New York City 2020** Not For Tourists, 2019-09-17 With details on everything from the Empire State Building to Max Fish, this is the only guide a native or traveler needs to navigate New York's neighborhoods and find the best restaurants, shopping, and more. System City, 2013-08-19 A radical shift is taking place in the way that society is thinking about cities a change from the machine metaphors of the 20th century to mathematical models of the processes of biological and natural systems From this new perspective cities are regarded not simply as spatially extended material artefacts but as complex systems that are analogous to living organisms exhibiting many of the same characteristics There is an emerging view that the design of the thousands of new cities needed for an expanding world population are to be founded on intelligent and inhabited infrastructural systems or flow architectures of urban metabolisms The physical arrays of the flow architecture of the city are intimately connected to the networks of subsidiary systems that collect and distribute energy materials and information They animate the city and should therefore be intimately coupled to the spatial and cultural patterns of life in the city to the public spaces through which people flow and should unite rather than divide urban morphological and ecological systems Featured architects AMID Büro Happold Foster Partners Groundlab and SOM Contributors include Joan Busquets Kate Davies and Liam Young Mehran Gharleghi Evan Greenberg and George Jeronimidis Marina Lathouri Wolf Mangelsdorf Daniel Segraves Jack Self Ricard Sol and Sergi Valverde and Iain Stewart
