

Adaptology: Mechanisms which help an organism to deal with the environment and its changes.

### Chapters 10-12: Stress and the Endocrine System

1. How exactly do stress hormones function for their small size and so they can be easily secreted into the blood? Explain why stress hormones have evolved a different mechanism than most. The mechanism: - stress hormones are secreted into the blood and then the target organs for specific cells. A very small and specific adaptation and - secretory cells have secretory granules. Explain the difference: - secretory cells have a lot of rough ER and Golgi apparatus and the secretory granules are in the cytoplasm. The secretory granules are in the cytoplasm and the secretory cells are in the cytoplasm.
2. How do hormones of the endocrine system function? Explain the mechanism of action of the endocrine system. What is the mechanism of action of the endocrine system? - The mechanism of action of the endocrine system is that the hormones are secreted into the blood and then they travel through the blood to the target organs. The target organs then respond to the hormones by changing their function.
3. Study the different endocrine glands in your text. Describe the different types of endocrine glands.
  - meaning: endocrine glands (Hormone) are secreted into the bloodstream through the bloodstream.
  - meaning: endocrine glands (Hormone) are secreted into the bloodstream through the bloodstream.
4. In all endocrine glands, which cells are the secretory cells? How do they secrete their hormones? Explain how the secretory cells secrete their hormones. The cells secrete their hormones into the bloodstream and then the hormones travel through the bloodstream to the target organs. The target organs then respond to the hormones by changing their function.
5. Which are the most important endocrine glands? Name them and describe them.
6. In the endocrine system, which glands are the most important? Name them and describe them. The most important endocrine glands are the hypothalamus, the pituitary, the thyroid, the parathyroid, the adrenal, the pancreas, the ovary, and the testis.
7. How do the glands of the endocrine system function? Explain the mechanism of action of the endocrine system. The glands of the endocrine system function by secreting hormones into the bloodstream. The hormones then travel through the bloodstream to the target organs. The target organs then respond to the hormones by changing their function.
