Tumor Microenvironment and Metabolic Reprogramming in Cancer Wei Chong,Hao Chen,Houjuan Zhu,Asif Raza,Yiju Wei,2024-10-18 Metabolic reprogramming is the hallmark of malignant tumors Both metabolic phenotype and metabolic dependence are changed during the development of cancer from precancerous tissue to local invasion to metastasis Cancer cells autonomously alter their flux through various metabolic pathways in order to meet the increased bioenergetic and biosynthetic demand as well as mitigate oxidative stress required for cancer cell proliferation and survival The change of the tumor microenvironment TME is a key factor driving tumor metabolic reprogramming The tumor microenvironment denotes the non cancerous cells and components presented in the tumor including molecules produced and released by them The constant interactions between tumor cells and the tumor microenvironment play decisive roles in tumor initiation progression metastasis and response to therapies More and more evidence has pointed out that the change in the tumor microenvironment is a key factor driving tumor metabolic reprogramming However the specific relationship between tumor metabolic reprogramming and tumor microenvironment remains unclear Indeed emerging evidence indicates that cancer cells are able to suppress the anti tumor immune response by competing for and depleting essential nutrients or otherwise reducing the metabolic fitness of tumor infiltrating immune cells The actual process of how metabolic reprogramming and cancer immune response affect each other has not been
