Prior Knowledge Questions (Do these BEFORE using the Gizmo.)

1. Label one of the **skulls** below as human and the other as a chimpanzee skull.

	Human			Chimpanzee
---	-------	--	---	------------

2. What features did you use to identify which skull was human and which was chimpanzee?

The chimpanzee has a longer skull and larger jaw bone.

Gizmo Warm-up

In 1924, a fossilized skull that looked very similar to a chimp skull was discovered. But the skull most definitely did not belong to a chimp. The location of the **foramen magnum**—a hole in the skull where the spinal cord exits—indicated that the individual was **bipedal**, or walked on two legs. This fossil was some of the earliest evidence of human evolution. Using the *Human Evolution – Skull Analysis* Gizmo, you will discover some of the ways that skulls can be used to learn about human evolution. Start by comparing two modern **hominids**: a human and a chimpanzee.

1. Examine the **Front view** of the *Homo sapiens* (modern human) skull, use the **Select skull** menu to examine the same view of the *Pan troglodytes* (chimp) skull.

Then,

How do the skulls compare?

The human skull has a smaller jaw, smaller teeth, and a larger forehead. Chimpanzees also have a larger nose.

Human Evolution Skull Analysis Gizmo Answers:

The Evolution of the Human Head Daniel E. Lieberman, 2011-01-03 In one sense human heads function much like those of other mammals. We use them to chew, smell, swallow, think, hear, and so on. But in other respects the human head is quite unusual. Unlike other animals, even our great ape cousins, our heads are short and wide, very big-brained, snoutless, largely furless, and perched on a short, nearly vertical neck. Daniel E. Lieberman sets out to explain how the human head works and why our heads evolved in this peculiarly human way. Exhaustively researched and years in the making, this innovative book documents how the many components of the head function, how they evolved since we diverged from the apes, and how they interact in diverse ways, both functionally and developmentally, causing them to be highly integrated. This integration not only permits the head's many units to accommodate each other as they grow and work, but also facilitates evolutionary change. Lieberman shows how, when, and why the major transformations evident in the evolution of the human head occurred. The special way the head is integrated, Lieberman argues, made it possible for a few developmental shifts to have had widespread effects on craniofacial growth, yet still permit the head to function exquisitely. This is the first book to explore in depth what happened in human evolution by integrating principles of development and functional morphology with the hominin fossil record. *The Evolution of the Human Head* will permanently change the study of human evolution and has widespread

ramifications for thinking about other branches of evolutionary biology. **The Skull of *Australopithecus afarensis*** R. William H. Kimbel, Yoel Rak, Donald C. Johanson, 2004-03-11 The book is the most in-depth account of the fossil skull anatomy and evolutionary significance of the 3.6-3.0 million-year-old early human species *Australopithecus afarensis*. Knowledge of this species is pivotal to understanding early human evolution because 1) the sample of fossil remains of *A. afarensis* is among the most extensive for any early human species, and the majority of remains are of taxonomically informative skulls and teeth; 2) the wealth of material makes *A. afarensis* an indispensable point of reference for the interpretation of other fossil discoveries; 3) the species occupies a time period that is the focus of current research to determine when, where, and why the human lineage first diversified into separate contemporaneous lines of descent. Upon publication of this book, this species will be among the most thoroughly documented extinct ancestors of humankind. The book details the comparative anatomy of the new skull and the cast of its brain, analyzed by R. Holloway and M. Huan, as well as of other skull and dental finds recovered during the latest ongoing field work at Hadar, and analyzes the evolutionary significance of *A. afarensis* in the context of other critically important discoveries of earliest humans made in recent years. In essence, it summarizes the state of knowledge about one of the central subjects of current paleoanthropological investigation. [The Fossil Evidence for Human Evolution](#)
