Vann,2012-03-20 As long as the human species has existed men and women have had to contend with the unpredictable forces of nature Geographer Barry A Vann brings a unique perspective to this age old struggle in this illuminating overview of human population shifts and their precarious relationship with climate change and geography Vann takes us on a journey along the migration routes of the earliest modern humans and tells why our ancestors chose to settle down in places that can be best described as natural utopias In the religiously oriented worldview of ancient peoples such places took on a sacred aura of divine favor Similarly destructive events such as volcanic eruptions and earthquakes were interpreted as expressions of divine wrath Vann shows how the ancient texts of the Bible and the Qur an offer glimpses of past climates that were distinctly different from the climate of our time He also discusses the rise of technology as a means of controlling the threatening features of the natural world Though technology has enabled humanity to cope with hostile climates it has also created a false sense of security Vann notes that population clusters are increasing in dangerous areas and that no technology can protect vulnerable groups from major

category hurricanes tornadoes or earthquakes Finally he considers our current anxieties regarding global warming pointing out that this focus has obscured a good deal of historical and geological evidence for a return of another ice age The Forces of Nature offers a challenging perspective on the precarious balance between fragile human communities and their often threatening environments

Senses of Place: Senses of Time G.J. Ashworth, 2017-03-02 Bringing together case studies from Ireland the Netherlands Canada Germany and Mexico this book examines the link between senses of place and senses of time It suggests that not only do place identities change through time but imagined pasts also provide resources which the present selects and packages for its own contemporary purposes and for forwarding to imagined futures The reasons behind the creation of place image are also explored setting them within political and social contexts In its three main sections Heritage in the Creation of Senses of Place Heritage and Conflicting Identities and Heritage and the Creation of Senses of Place the book examines the creation of place identities at the urban rural regional and international scales It questions how senses of place interact with senses of ethnic cultural identity what the roles of government media residents and tourists are in creating senses of place and how and why all these variables change through time

The Political Discourse of Spatial Disparities Ferenc Gyuris, 2013-10-30 This work aims to provide unique insights into the multidisciplinary research on spatial disparities from an unconventional point of view It breaks with the conventional narrative that tends to interpret this theoretical tradition as a series of factual contributions to a better understanding of the issue Instead related theories are investigated in their political economic and social contexts and spatial disparity research is presented as a political discourse It also reveals how the propagandistic problematization or de problematization of geographical inequalities serves the substantiation of political goals while taking advantage of the

legitimate authority of science and the image of scientific objectivity The book explains how the discourse has functioned from 19th century social physics over the Cold War period up to Marxist geographies of the current neoliberal age and in what way and to what extent political considerations prevent related concepts producing objective knowledge about the complex phenomenon of spatial inequalities *American Book Publishing Record* ,2006 **Global Perspectives in the Geography Curriculum** Alex Standish,2008-10-07 For geographers across the globe this book provides the arguments for a return to the teaching of geography and why they should reject the politicisation of the subject by education policy makers and politicians Standish s careful critique shows the necessity of a depoliticised geography curriculum the irony of which would be that it would ensure that every child could point to Iraq Iran and Afghanistan on a map Prof Dennis Hayes Oxford Brookes University UK A prescient and critical analysis of the changing face of geography teaching This book deserves to be widely read and debated Alex Standish s book puts current trends in geography teaching in historical and critical context It comprises a forthright and timely defence of geographical education for its own sake Dr Jim Butcher FRSA Department of Sport Science Tourism and Leisure Canterbury Christ Church University Since the early 1990s educational policy makers and some subject leaders have been seeking to fundamentally change the teaching of geography in UK and US schools from a subject which encourages students to explore spatial concepts ideas and skills to a more ethics based subject concerned with the promotion of environmentalism cultural diversity and social justice In this book the new approach is critically examined within a historical and ideological context addressing a number of fundamental questions Should geography be used as a tool for the delivery of citizenship ideals How does this affect the intellectual and moral value of geographical education for young people If the state and teachers are taking more responsibility for the values attitudes and emotional responses of students how will they learn to develop these qualities for themselves If global perspectives shift the focus of education from learning about the outside world to learning about the self what is its vision of social progress and conception of social change This book advocates a return to liberal models of education arguing that the new approach to geography currently being promoted for schools fundamentally undermines the educational value of the subject and the freedom of young people to shape the world in which they live A vital resource for teachers and student teachers alike **Global Perspectives in the Geography Curriculum** makes a significant contribution to the growing debate about the future direction of the discipline itself **Handbook of Research on Administration, Policy, and Leadership in Higher Education** Mukerji, Siran,Tripathi, Purnendu,2016-09-27 The creation of a sustainable and accessible higher education systems is a pivotal goal in modern society Adopting strategic frameworks and innovative techniques allows institutions to achieve this objective The Handbook of Research on Administration Policy and Leadership in Higher Education is an authoritative reference source for the latest scholarly research on contemporary management issues in educational institutions and presents best practices to improve policies and retain effective governance Addressing the current state of higher education at an international level this book is
