

# Chapter 6: Humans in the Biosphere

---

## State Standards

6.2 Analyze changes in population size and bio-diversity (speciation and extinction) that result from natural causes, changes in climate, human activity, and the introduction of invasive, non-native species.

## Key Terms

Monoculture  
Renewable Resources  
Nonrenewable Resources  
Sustainable Development  
Agriculture  
Industrial Development

Desertification  
Deforestation  
Pollutant  
Biological Magnification  
Smog  
Acid Rain

Biodiversity  
Ecosystem Diversity  
Species Diversity  
Genetic Diversity  
Habitat Fragmentation  
Ecological Hot Spot

## You should be able to:

1. Describe human activities that can affect the biosphere.
2. Describe the relationship between resource use and sustainable development.
3. Describe how human activities affect soil and land resources.
4. Describe how human activities affect water resources.
5. Describe how human activities affect air resources.
6. Define biodiversity and explain its value.
7. Identify current threats to biodiversity.
8. Describe how biodiversity can be preserved.
9. Explain the concept of ecological footprint.
10. Identify the role of ecology in a sustainable future.

## You should know the difference between:

- Renewable and nonrenewable resources
- Exponential and logistic growth
- Species diversity, Habitat Diversity, Biodiversity, and Genetic Diversity
- Sustainable and Unsustainable human activities (including examples)
- Density dependent and density independent factors (including examples)

 world history **Indigenous Practice and Community-Led Climate Change Solutions** Rani Muthukrishnan,Ranjan  
 Datta,2023-12-01 This book centers Indigenous knowledge and practice in community led climate change solutions This book  
 will be one of the first academic books to use the consciousness framework to examine and explain humans situatedness and  
 role in maintaining ecosystems health Drawing on teachings from the Indigenous Adi Shaiva community the authors present  
 up to date research on meanings and implications of South Asian traditional cosmic knowledge which focuses on relationality  
 and spirituality connected to climate change This knowledge can create innovative climate change solutions in areas  
 including land water traditional management sustainability goals and expectations and state development projects Overall  
 this book provides an innovative framework for nonviolent climate solutions which has its foundations in a traditional cosmic  
 and consciousness based context This book which aims to bridge the gap between Indigenous and Western perspectives by re  
 educating researchers and decolonizing popular climate change solutions will be of great interest to students and scholars  
 studying climate change conservation environmental anthropology and Indigenous studies on a broader scale **The Ethics  
 of Climate Change** Byron Williston,2023-08-24 The Ethics of Climate Change An Introduction systematically and  
 comprehensively examines the ethical issues surrounding arguably the greatest threat now facing humanity This second  
 edition has been updated and includes two new chapters on climate change and capitalism and climate change and law  
 Williston addresses important questions such as Has humanity entered the Anthropocene epoch Is climate change primarily  
 an ethical or an economic issue Can capitalism be reformed to prevent climate catastrophe What are the moral failings of  
 international climate diplomacy What are the main causes of political inaction and climate denial Should tort law be used to  
 sue those responsible for climate change What are intragenerational and intergenerational justice Is geoengineering an

ethically justifiable response to climate change Featuring case studies throughout this textbook provides a philosophical introduction to an immensely topical issue studied by students within the fields of applied ethics global justice sustainability geography and politics

*Environmental Science* Michael L. McKinney, Robert M. Schoch, 2003 This edition provides a comprehensive overview and synthesis of current environmental issues and problems

**Systemic Management** Charles W. Fowler, 2009-03-26 Systemic management describes a holistic objective and universally applicable form of management providing a framework for addressing environmental challenges such as global warming emergent diseases deforestation overpopulation the extinction crisis pollution over fishing and habitat destruction Its goals are the consistently sustainable relationships between humans and ecosystems between humans and other species and between humans and the biosphere This book presents a convincing argument that these goals and the means to achieve them can be inferred from empirical information It describes how comparisons between humans and other species reveal patterns that can serve to guide management toward true sustainability i.e. ways that are empirically observed to work in natural systems This objective approach has rarely been possible in conventional management because sustainability is invariably undermined by conflicting human values Systemic management is presented as a specialized process of pattern based decision making that avoids the inconsistency subjectivity and error in current management practice It clearly demonstrates how mimicking nature's empirical examples of sustainability can circumvent anthropocentric tendencies to overuse misuse human values in management and illustrates the science best suited for achieving sustainability through examples of research that address specific management questions

People and Environment Gareth Jones, 2014-06-11 *People and Physical Environment A Global Approach* provides an introduction to the main areas of environmental concern for geographers environmental scientists and planners at the beginning of the twenty first century These include Pollution of the atmosphere and its impact on our climate The exploitation of the oceans Management and supply of fresh water Degradation of the land and Biodiversity and the need to maintain genetic diversity The book argues that our knowledge and understanding of the environment is now so great that we can predict with considerable accuracy where the skills of science and technology need to be focussed in order to prevent severe environmental damage from occurring Achieving successful management of the environment has become dependent upon active participation of a society prepared to pay for a high quality of life and the willingness of our elected politicians to legislate and enforce the very highest standards of environmental management This book will be essential reading for students of geography environmental studies science and land use planners and will also contribute valuable information for climatology biogeography hydrology land economy and forestry students

*Understanding and Solving Environmental Problems in the 21st Century* R. Costanza, S.E. Jorgensen, 2002-06-05 The aim of this book is to encourage integration of the natural and social sciences with the policy and design making community and thereby develop a deeper understanding of complex environmental problems Its fundamental themes are integrated

modeling and assessment complex adaptive hierarchical systems ecosystem services science and decision making ecosystem health and human health quality of life and the distribution of wealth and resources This book will act as a state of the art assessment of integrated environmental science and its relation to real world problem solving It is aimed not only at the academic community but also as a sourcebook for managers policy makers and the informed public It deals both with the state of the science and the level of consensus among scientists on key environmental issues The concepts underlying this book were developed at the 2nd EcoSummit workshop held in Halifax Nova Scotia June 2000 with active participation from all delegates and attempts to present their collective view
