Spencer Hollingsworth, of Salt Lake City, cleans a route on his way down Rhode Wall on Monday morning while finishing up a Labor Day weekend road trip through Yellowstone and Grand Teton national parks.

Quake swarm gives Idaho a good shake

By Mike Korman,
JACKSON-HOLE DAILY

A portion of the Intermountain Seismic Belt that's crisscrossing up to the west of Star Valley has produced dozens of small earthquakes since Saturday.

Topping out at magnitude 5.3, the cluster of earthquakes, known as a "swarm," first shook the earth near Soda Springs, Idaho, at around 6 p.m. Saturday, and was still emitting aftershock tremors in the early afternoon hours Monday. University of Utah geophysicist Bob Smith, a Moose resident, said the succession of tremors was "notable" and "widely" felt — perceptible to humans from Salt Lake City to Jackson Hole.

"It was still going this morning, I noticed," Smith said, "but the magnitude has decreased and the number of earthquakes is decreasing."

The epicenter of the swarm, in the foothills of the Caribou Range, is in a location that experiences a fair amount of earthquake activity. Specifically, it falls within the Intermountain Seismic Belt, a zone of instability stretching from near Lethbridge, Alberta, to the Mojave Desert in Southern California, skirting Yellowstone National Park,

Jackson Hole and southeast Idaho along the way.

At press time the quake swarm had produced 78 tremors. The Blaine County sheriff told the Pocatello newspaper, The Blaine State Journal, that he couldn't recall such a rapid succession of earthquakes in his four decades on the job.

"I've never seen anything like this," Loris Nielsen told the Journal. "My wife asked if we should leave the house."

Although remarkable locally, the Soda Springs swarm is small potatoes compared with the ongoing swarm to the northeast of West Yellowstone, Montana. That event has now persisted for nearly three months and has produced 8,000 or so earthquakes, Smith said.

"It's still lurching right along," Smith said, "and it's now one of the longest sequences of swarms that we've had in Yellowstone."

"Ninety percent are less than magnitude 3 or so," he said, "although I'm sure that a lot of them were felt in West Yellowstone."

The only swarm in recorded Yellowstone history that was more powerful in magnitude was the 1983-86 swarm, which the 2017 See *SWARM* on page 2

National park icons threatened by wind-frenzied fires

HELENA, Mont. (AP) — Winds wreaked havoc on wildfires that were threatening two crown jewels of the National Park Service on Monday, pushing the flames toward manmade and natural icons in and around Glacier and Yellowstone national parks.

The wind-driven fires, combined with high temperatures and dry conditions, have disrupted holiday travel and hampered firefighters across the West during a Labor Day weekend that capped a devastating

summer in which an area larger than Rhode Island has burned.

The dozens of fires burning across the West and Canada have blanketed the air with choking smoke from Oregon, where ash fell on the town of Cascade Locks, to Colorado, where health officials issued an air quality advisory alert.

A fire in Montana's Glacier National Park emptied the park's busiest tourist spot as wind gusts drove the

blaze toward the doorstep of a century-old lodge. The 14-square-mile fire that consumed a historic Glacier backcountry chalet last week was about a mile away from Lake McDonald Lodge, a 1917-year-old Swiss style hotel.

The lodge's setting on the lake as the Going-to-the-Sun Road begins its vertigo-inducing climb up the Continental Divide has made it an enduring park See *FTMES* on page 6
