Handbook of Classical Conditioning David G. Lavond, Joseph E. Steinmetz, 2012-12-06 When conducting scientific research in any field it is not sufficient to simply design thoughtful and informative experiments to explore ideas and hypotheses The experiments must be conducted in such a manner that the data generated effectively address the ideas and hypotheses under study Collecting good data necessitates the use of good methods techniques and instrumentation Behavioral neuroscience is most certainly a field that over the years has required novel inventive and effective methods and techniques to collect data on a rather difficult subject namely how the brain and nervous system encode behavior Perhaps one of the most interesting things about the field of behavioral neuroscience is that most scientists in this field are engaged in a variety of activities it is not always the same boring routine The rule not the exception in this field is that investigators are trained in a variety of techniques and skills This work requires knowledge of skills in such diverse techniques as surgery animal training basic electronics computer programming statistics and histology as well as having a good theoretical background knowledge of the relevant literature and the creativity and logic necessary to design and execute critical experiments One does not have to be an expert in all of these skills and conversely not all skills require an expert
