Herman, 2016-09-19 This book helps students explore Fourier analysis and its related topics helping them appreciate why it pervades many fields of mathematics science and engineering This introductory textbook was written with mathematics science and engineering students with a background in calculus and basic linear algebra in mind It can be used as a textbook for undergraduate courses in Fourier analysis or applied mathematics which cover Fourier series orthogonal functions Fourier and Laplace transforms and an introduction to complex variables These topics are tied together by the application of the spectral analysis of analog and discrete signals and provide an introduction to the discrete Fourier transform A number of examples and exercises are provided including implementations of Maple MATLAB and Python for computing series expansions and transforms After reading this book students will be familiar with Convergence and summation of infinite series Representation of functions by infinite series Trigonometric and Generalized Fourier series Legendre Bessel gamma and delta functions Complex numbers and functions Analytic functions and integration in the complex plane Fourier and Laplace transforms The relationship between analog and digital signals Dr Russell L Herman is a professor of Mathematics and Professor of Physics at the University of North Carolina Wilmington A recipient of several teaching awards he has taught introductory through graduate courses in several areas including applied mathematics partial differential equations mathematical physics quantum theory optics cosmology and general relativity His research interests include topics in nonlinear wave equations soliton perturbation theory fluid dynamics relativity chaos and dynamical systems

Undergraduate Mathematics for the Life Sciences Glenn Ledder, Jenna P. Carpenter, Timothy D. Comar, 2013 There is a gap between the extensive mathematics background that is beneficial to biologists and the minimal mathematics background biology students acquire in their courses The result is an undergraduate education in biology with very little quantitative content New mathematics courses must be devised with the needs of biology students in mind In this volume authors from a variety of institutions address some of the problems involved in reforming mathematics curricula for biology students The problems are sorted into three themes Models Processes and Directions It is difficult for mathematicians to generate curriculum ideas for the training of biologists so a number of the curriculum models that have been introduced at various institutions comprise the Models section Processes deals with taking that great course and making sure it is institutionalized in both the biology department as a requirement and in the mathematics department as a course that will live on even if the

creator of the course is no longer on the faculty Directions looks to the future with each paper laying out a case for pedagogical developments that the authors would like to see

Understanding Electromagnetic Waves Ming-Seng Kao, Chieh-Fu Chang, 2020-07-14 This one semester textbook teaches students Electromagnetic Waves via an early introduction to Maxwell's Equations in the first chapter Mathematics fundamentals are used as needed but rigor is de-emphasized in preference to understanding the basic ideas and principles of EM waves Each chapter includes extensive step by step solved examples as well as abundant exercises Designed for a one semester course in electromagnetic waves Introduces Maxwell's equations in the first chapter De-emphasizes mathematical rigor in order to make key ideas and principles easy to understand Makes material accessible to readers of varying backgrounds with extensive use of solved examples Includes abundant exercises for each chapter
