Levers of Power Michael Schwartz, Tarun Banerjee, Kevin A.

Young, 2020-07-07 It is no secret that the 1% the business elite that commands the largest corporations and the connected network of public and private institutions exercise enormous control over U S government While this control is usually attributed to campaign donations and lobbying Disruptive Power argues that corporate power derives from control over the economic resources on which daily life depends Government officials must constantly strive to keep capitalists happy lest they go on capital strike that is refuse to invest in particular industries or locations or move their holdings to other countries and therefore impose material hardship on specific groups or the economy as a whole For this reason even politicians who are not dependent on corporations for their electoral success must fend off the interruption of corporate investment Disruptive Power documents the pervasive power of corporations and other institutions with decision making control over large pools of capital particularly the Pentagon It also shows that the most successful reform movements in recent U S history for workers rights for civil rights and against imperialist wars succeeded by directly targeting the corporations and other institutional adversaries that initiated and benefitted from oppressive policies Though most of today's social movements focus on elections and politicians movements of the 99% are most effective when they inflict direct costs on corporations and their allied institutions This strategy is also more conducive to building a revolutionary mass movement that can replace current institutions with democratic alternatives

Improving Bayesian Reasoning: What Works and Why? Gorka Navarrete,David R. Mandel,2016-02-02 We confess that the first part of our title is somewhat of a misnomer Bayesian reasoning is a normative approach to probabilistic belief revision and as such it is in need of no improvement Rather it is the typical individual whose reasoning and judgments often fall short of the Bayesian ideal who is the focus of improvement What have we learnt from over a half century of research and theory on this topic that could explain why people are often non Bayesian Can Bayesian reasoning be facilitated and if so why These

are the questions that motivate this Frontiers in Psychology Research Topic Bayes theorem named after English statistician philosopher and Presbyterian minister Thomas Bayes offers a method for updating one's prior probability of an hypothesis H on the basis of new data D such that $P(H|D) = \frac{P(D|H)P(H)}{P(D)}$ The first wave of psychological research pioneered by Ward Edwards revealed that people were overly conservative in updating their posterior probabilities i.e. $P(H|D) < \frac{P(D|H)P(H)}{P(D)}$ A second wave spearheaded by Daniel Kahneman and Amos Tversky showed that people often ignored prior probabilities or base rates where the priors had a frequentist interpretation and hence were not Bayesians at all In the 1990s a third wave of research spurred by Leda Cosmides and John Tooby and by Gerd Gigerenzer and Ulrich Hoffrage showed that people can reason more like a Bayesian if only the information provided takes the form of non relativized natural frequencies Although Kahneman and Tversky had already noted the advantages of frequency representations it was the third wave scholars who pushed the prescriptive agenda arguing that there are feasible and effective methods for improving belief revision Most scholars now agree that natural frequency representations do facilitate Bayesian reasoning However they do not agree on why this is so The original third wave scholars favor an evolutionary account that posits human brain adaptation to natural frequency processing But almost as soon as this view was proposed other scholars challenged it arguing that such evolutionary assumptions were not needed The dominant opposing view has been that the benefit of natural frequencies is mainly due to the fact that such representations make the nested set relations perfectly transparent Thus people can more easily see what information they need to focus on and how to simply combine it This Research Topic aims to take stock of where we are at present Are we in a proto fourth wave If so does it offer a synthesis of recent theoretical disagreements The second part of the title orients the reader to the two main subtopics what works and why In terms of the first subtopic we seek contributions that advance understanding of how to improve people's abilities to revise their beliefs and to integrate probabilistic information effectively The second subtopic centers on explaining why methods that improve non Bayesian reasoning work as well as they do In addressing that issue we welcome both critical analyses of existing theories as well as fresh perspectives For both subtopics we welcome the full range of manuscript types

Multi-scale Variability of Ecosystem Functioning in European and Chinese Shelf Seas Xueen Chen, Qicheng Meng, Jie Nie, Wenyan Zhang, Jun Sun, Ute Daewel, 2024-08-26

Continued global warming and ocean acidification are predicted with high confidence while the direction and magnitude of changes of other atmospheric drivers e g precipitation wind and nutrient loading are of high uncertainty and regionally dependent Biogeochemical responses of coastal shelf seas to external drivers are often nonlinear involving feedback that may amplify or dampen a perturbation imposed on the system Coupled physical biogeochemical process based numerical models have proven useful in elucidating the mechanistic interplay and relative importance of the different factors contributing to ecosystem functioning with increasing realism This research topic aims to understand and compare marine ecosystem functioning in Chinese and European shelf seas based on studies that use state of the art modeling and monitoring of coastal ecosystem dynamics This topic will enable more efficient knowledge share and distribution through a comparative assessment between distinct coastal shelf systems in China and Europe to further our understanding of complicated ecosystem dynamics in response to a changing climate and increasing anthropogenic pressure It will allow us to better understand the sensitivity of coastal shelf ecosystem functioning to physical and biogeochemical perturbations the role of shelf seas in global carbon cycling and the resilience of Chinese and European shelf seas to ongoing and future changes in climate and anthropogenic activities
