**Unraveling the Exposome** Sonia Dagnino, Anthony Macherone, 2018-10-08 This volume presents a comprehensive overview of the science and application of the Exposome through seventeen chapters from leaders in the field. At just over ten years since the term was coined by Christopher Wild in 2005, this is the first field defining volume to offer a holistic picture of the important and growing field of Exposomics. The term Exposome describes the sum of all exposures, not only chemical, that an individual can receive over a lifetime from both exogenous sources (environmental contaminants, food, lifestyle, drugs, air, etc.) and endogenous sources (metabolism, oxidative stress, lipid peroxidation, chemicals synthesized by the microbiome, etc.). The first section of this book contains chapters that discuss how the Exposome is defined and how the concept fits into the fields of public health and epidemiology. The second section provides an overview of techniques and methods to measure the human Exposome. The third section contains methods and applications for measuring the Exposome through external exposures. Section four provides an overview on statistical and computational techniques including big data analysis for characterizing the Exposome. Section five presents a global collection of case studies. *New EU criteria for endocrine disruptors* Nordic Council of Ministers, 2018-08-30. Endocrine disruptors (EDs) are substances that adversely affect hormone function. The effects by EDs are thought to depend on both dose and timing of exposure, especially during foetal development. The upcoming EU regulation on identification of EDs, application biocides and pesticides, will have an impact on all actors of the food chain. The consequences of a ban of EDs in foods were discussed in a Nordic workshop, Uppsala, 29-30 Nov 2016, where risk assessors and managers from Nordic food authorities, industry, trade associations, consumer organizations, and researchers were represented. It was recognized by all participants that a ban was particularly challenging for the production chain since there are few viable alternatives. A harmonized EU legislation based on scientific risk assessment was preferred compared to national specific legislation as it treats all the actors equally.

**Microirrigation for Crop Production** James E. Ayars, Daniele Zaccaria, Khaled M. Bali, 2023-11-23.
