

ACTION:

If the cigarette lighter body is removed from an Elise, it is most important that the positive and negative leads are correctly orientated on re-fitment. Transposition of these leads may result in a feedback condition such that *with the lights switched on*, the engine will continue to run after turning off the ignition.

The correct connection is as follows:

Green cable (positive, ignition supply);

Black cable (negative, earth);

Red cable (positive from sidelamps circuit);

- to centre terminal for heating element.

- to side terminal to earth heating element and illumination bulb.

- to bulb holder (smaller terminal).
