This steering is a hydraulic power steering with a semi-rigid (follow-up, mechanical) linkage which transmits steering to the wheels at power failure.

The flow divider provides a priority flow to the steering system for smooth, responsive control under all operating conditions, even at low engine speeds.

The steering control valve features a reaction chamber which creates steering feel to permit the operator to maintain full feel at all times.

The steering position is regulated by the relief valve built in the flow divider.

For the flow divider and relief valve, refer to **HYDRAULIC SYSTEM**.
