**Handbook of Disability Studies** Gary L. Albrecht, Katherine D. Seelman, Michael Bury, 2001-05-24. This path-breaking international handbook of disability studies signals the emergence of a vital new area of scholarship, social policy, and activism. Drawing on the insights of disability scholars around the world and the creative advice of an international editorial board, the book engages the reader in the critical issues and debates framing disability studies and places them in an historical and cultural context. Five years in the making, this one volume summarizes the ongoing discourse ranging across continents and traditional academic disciplines. To provide insight and perspective, the volume is divided into three sections: The shaping of disability studies as a field, experiencing disability, and disability in context. Each section, written by world-class figures, consists of original chapters designed to map the field and explore the key conceptual, theoretical, methodological, practice, and policy issues that constitute the field. Each chapter provides a critical review of an area, positions and literature, and an agenda for future research and practice. The handbook answers the need expressed by the disability community for a thought-provoking interdisciplinary international examination of the vibrant field of disability studies. The book will be of interest to disabled people, scholars, policy makers, and activists alike. The book aims to define the existing field, stimulate future debate, encourage respectful discourse between different interest groups, and move the field a step forward.

**Genetic Discrimination** Gerard Quinn, Aisling de Paor, Peter Blanck, 2014-11-20. As genetic technologies advance, genetic testing may well offer the prospect of detecting the onset of future disabilities. Some research also forwards that certain behavioural profiles may have a strong genetic basis, such as the determination to succeed or the propensity for risk-taking. As this technology becomes more prevalent, there is a danger that genetic information may be misused by third parties and that particular genetic profiles may be discriminated against by employers, by providers of social goods and services such as insurance companies, and even by educational facilities. This book explores the different forms and potential uses of genetic testing. Drawing together leading experts in disability law, bioethics, health law, and a range of related fields, it highlights the ethical and legal challenges arising as a result of emerging and rapidly advancing genetic science. On examining transatlantic

perspectives on the matter chapters in the book ask whether the US Genetic Information Nondiscrimination Act GINA is proving to be an effective tool in addressing the issue of genetic discrimination and alleviating fears of discrimination The book also reviews what insights may be gained from GINA within employment and health insurance contexts and asks how the UN Convention on the Rights of Persons with Disabilities CRPD may impact similar debates within the European Union The book focuses particularly on the legislative and policy framework in the European Union with an emphasis on the gaps in protection and the scope for specific legislative action in this area This book will be of great interest to scholars and students of discrimination law bioethics and disability law and will be of considerable use to legal practitioners medical practitioners and policy makers in this area

**Disability** Robert M. Baird, Stuart E. Rosenbaum, 2008-12-31 What is it like to experience disability What are the prevailing cultural attitudes toward those who experience disability How do social norms and public policies affect those experiencing disability This book provides a vivid and concrete introduction to the wealth of social political and ethical debates that surround the experience of disability Beginning with an exploration of the perspective of persons with disabilities the essays demonstrate the extent to which the disability experience is affected by social and cultural values attitudes and policies In addition to these first person reflections there are essays relating to such issues as The disability rights movement Disability studies Social policy relating to disability Physician assisted suicide genetic testing selective abortion the moral status of handicapped newborns and living and dying with dignity Written in an engaging style with a focus on the concrete this collection of essays includes contributions by John Hockenberry Oiver Sacks Peter Singer and others It is a marvelous resource for enabling the reader to comprehend the experience of disability and to explore contemporary issues involving the disability community

*Eco Crime and Genetically Modified Food* Reece Walters, 2010-10-04 The GM debate has been ongoing for over a decade yet it has been contained in the scientific world and presented in technical terms Eco Crime and Genetically Modified Food brings the debates about GM food into the social and criminological arena This book highlights the criminal and harmful actions of state and corporate officials It concludes that corporate and political corruption uncertain science bitter public opposition growing farmer concern and bankruptcy irreversible damage to biodiversity corporate monopolies and exploitation disregard for social and cultural practices devastation of small scale and local agricultural economies imminent threats to organics weak regulation and widespread political and biotech mistrust do not provide the bases for advancing and progressing GM foods into the next decade Yet with the backing of the WTO the US and UK Governments march on but at what cost to future generations
