2.1.29 (counting principles)(Plover)

Let G be a finite nonempty set with an operation $*$ such that:

1. G is closed under $*$.
2. $*$ is associative.
3. Given $a, b, c \in G$ with $a*b = a*c$, then $b=c$.
4. Given $a, b, c \in G$ with $b*a = c*a$, then $b=c$.

Prove that G must be a group under $*$.

Pf YunÃÔCú (1) There exists a special element $e \in G$ such that $e*a = a*e = a$ for all $a \in G$. (2) For every $a \in G$ there exists an element $b \in G$ such that $a*b = b*a = e$.

Let the order of G be n . For any $a \in G$, we consider a sequence $\{a^i\}$

Herstein, 1986 **Basic Abstract Algebra: Exercises And Solutions** Mohammed Hichem Mortad, 2022-02-10 This book is mainly intended for first year University students who undertake a basic abstract algebra course as well as instructors It contains the basic notions of abstract algebra through solved exercises as well as a True or False section in each chapter Each chapter also contains an essential background section which makes the book easier to use **Abstract Algebra Manual** Ayman Badawi, 2004 This is the most current textbook in teaching the basic concepts of abstract algebra The author finds that there are many students who just memorise a theorem without having the ability to apply it to a given problem Therefore this is a hands on manual where many typical algebraic problems are provided for students to be able to apply the theorems and to actually practice the methods they have learned Each chapter begins with a statement of a major result in Group and Ring Theory followed by problems and solutions Contents Tools and Major Results of Groups Problems in Group Theory Tools and Major Results of Ring Theory Problems in Ring Theory Index *Algebra through practice : a collection of problems in algebra with solutions. 6. Rings, fields and modules* T. S. Blyth, Thomas Scott Blyth, 1985 Problem solving is an art that is central to understanding and ability in mathematics With this series of books the authors have provided a selection of problems with complete solutions and test papers designed to be used with or instead of standard textbooks on algebra For the convenience of the reader a key explaining how the present books may be used in conjunction with some of the major textbooks is included Each book of problems is divided into chapters that begin with some notes on notation and prerequisites The majority of the material is aimed at the student of average ability but there are some more challenging problems By working through the books the student will gain a deeper understanding of the fundamental concepts involved and practice in the formulation and so solution of other algebraic problems Later books in the series cover material at a more advanced level than the earlier titles although each is within its own limits self contained **Algebra Through Practice: Volume 2, Matrices and Vector Spaces** Thomas Scott Blyth, E. Algebra Louis Halle Rowen, Uzi Vishne, 2025-02-21 Algebra is a subject we have become acquainted with during most of our mathematical education often in connection with the solution of equations *Algebra Groups Rings and Fields Second Edition* deals with developments related to their solutions The principle at the heart of abstract algebra a subject that enables one to deduce sweeping conclusions from elementary premises is that the process of abstraction enables us to solve a variety of such problems with economy of effort This leads to the glorious world of mathematical discovery This second edition follows the original three pronged approach the theory of finite groups number theory and Galois amazing theory of field extensions tying solvability of equations to group theory As algebra has branched out in many directions the authors strive to keep the text manageable while at the same time introducing the student to exciting new paths In order to support this approach the authors broadened the first edition giving monoids a greater role and relying more on matrices Hundreds of new exercises were added A course in abstract algebra properly presented could treat mathematics as an art as well as a science In this exposition we try to present underlying ideas as well as the results they yield
