Natural Building Stones Stavros K. Kourkoulis, 2007-06-17 The fracture and failure of natural building stones has been for many years the concern of the engineering community and particularly the community of scientists working for the restoration and conservation of stone monuments The need to protect the authentic stone and the requirement for reversibility of the interventions rendered the in depth knowledge of the mechanical behaviour of both the authentic material and its substitutes dispensable This book contains 36 papers presented at the Symposium on Fracture and Failure of Natural Building Stones which was organized in the frame of the 16th European Conference on Fracture ECF16 The Conference took place in Alexandroupolis Hellas on July 3-7 2006 To my best knowledge this is the first time that a special Symposium of a European Conference on Fracture is devoted exclusively to the study of the fracture and failure of building stones The book consists of invited papers written by leading experts in the field It contains original contributions concerning the latest developments in the fracture and failure of the natural building stones and their application in the restoration of ancient monuments It covers a wide range of subjects including purely mechanical aspects physico chemical approaches applications and case studies The papers are arranged in two parts with a total of nine chapters Part I is devoted to purely mechanical and structural aspects and applications while Part II is devoted to the physico chemical and environmental aspects including thermal effects
