## LAB EXERCISE 5: Lizard Evolution Virtual Lab

Answer the following questions as you finish each module in the virtual lab.

### MODULE 1: Introduction

At the beginning of the virtual lab, you were asked to select eight lizards from a category. What criteria did you use to select your group?

My criteria were: color, size, and shape of the lizards.

Did your criteria yield similar results? Why?

Yes, because the criteria were similar. I thought about choosing lizards that were similar in color, but I chose lizards that were similar in shape and size.

An adaptation is a structure or function that the organism has as a population because it increases the ability to survive and reproduce in a particular environment. Provide one example and an explanation of an adaptation in the lizard group.

The adaptation of the lizard group is the color of the lizards. The color of the lizards is a adaptation because it helps them to survive and reproduce in their environment.

Provide one evolutionary explanation for why diversifying in that way isn't affecting fitness (i.e., the group) would have resulted in speciation.

Speciation is the process by which a population of organisms splits into two or more groups. This can happen because of a change in the environment, or because of a change in the genetic makeup of the population.
