Using Design Research and History to Tackle a Fundamental Problem with School Algebra Sinan Kanbir, M. A. (Ken) Clements, Nerida F. Ellerton, 2017-10-28 In this well illustrated book the authors Sinan Kanbir Ken Clements and Nerida Ellerton tackle a persistent and universal problem in school mathematics why do so many middle school and secondary school students find it difficult to learn algebra well What makes the book important are the unique features which comprise the design research approach that the authors adopted in seeking a solution to the problem The first unique feature is that the authors offer an overview of the history of school algebra Despite the fact that algebra has been an important component of secondary school mathematics for more than three centuries there has never been a comprehensive historical analysis of factors influencing the teaching and learning of that component The authors identify through historical analysis six purposes of school algebra a algebra as a body of knowledge essential to higher mathematical and scientific studies b algebra as generalized arithmetic c algebra as a prerequisite for entry to higher studies d algebra as offering a language and set of procedures for modeling real life problems e algebra as an aid to describing structural properties in elementary mathematics and f algebra as a study of variables They also raise the question whether school algebra represents a unidimensional trait Kanbir Clements and Ellerton offer an unusual hybrid theoretical framework for their intervention study by which seventh grade students significantly improved their elementary algebra knowledge and skills Their theoretical frame combined Charles Sanders Peirce's triadic signifier interpretant signified theory which is in the realm of semiotics with Johann Friedrich Herbart's theory of apperception and Ken Clements and Gina Del Campo's theory relating to the need to expand modes of communications in mathematics classrooms so that students engage in receptive and expressive modes Practicing classroom teachers formed part of the research team This book appears in Springer's series on the History of Mathematics Education Not only does it include an important analysis of the history of school algebra but it also adopts a theoretical frame which relies more on theories from the past than on contemporary theories in the field of mathematics education The results of the well designed classroom intervention are sufficiently impressive that the study might

have created and illuminated a pathway for future researchers to take

leadership in tackling our three major demons which now mainly account for the problem IQ lag fatherless families crime AMSAC had its origin about 100 years ago when after the death of Washington DuBois gained ascendancy in our African American Garden of Eden and replaced Washingtons brains property and character gospel with a civil rights agenda That agenda has led to a civil rights fixation and our second bondage Victimology wherein being the victim has become part of our core identity and made us psychological slaves Rather than being proud and self reliant disproportionately we have come to see ourselves as victims who are entitled to system help and special treatment This bondage and it is a bondage vitiates our manhood and the energy and drive required to pursue the adaptation pathway paved by Washington but demonized by DuBois Return to that pathway and we can confront and conquer AMSAC and our three major demons Guided by history and the research evidence this book details how Its 20 chapters make for long reading but just by reading the first and last chapters you can get the message The motto of the proposed evidence based experimental program the African American Male Career Pathway Program AMCAP A special appeal is made to black athletes and entertainers to help propagate this motto and support the proposed high school student clubs Student AMCAPs in its implementation
