Pollack,2004 Proceedings from the ninth International Conference on Artificial Life papers by scientists of many disciplines focusing on the principles of organization and applications of complex life like systems Artificial Life is an interdisciplinary effort to investigate the fundamental properties of living systems through the simulation and synthesis of life like processes The young field brings a powerful set of tools to the study of how high level behavior can arise in systems governed by simple rules of interaction Some of the fundamental questions include What are the principles of evolution learning and growth that can be understood well enough to simulate as an information process Can robots be built faster and more cheaply by mimicking biology than by the product design process used for automobiles and airplanes How can we unify theories from dynamical systems game

theory evolution computing geophysics and cognition The field has contributed fundamentally to our understanding of life itself through computer models and has led to novel solutions to complex real world problems across high technology and human society This elite biennial meeting has grown from a small workshop in Santa Fe to a major international conference This ninth volume of the proceedings of the international A life conference reflects the growing quality and impact of this interdisciplinary scientific community

*Final Solutions* Richard M. Lerner, R. C. Lewontin, Benno Muller-Hill, 2010-11 The nature nurture debate continues to stir controversy in the social and behavioral sciences How much of human behavior and development can be attributed to biology and how much to the environment Can either be said to determine human development And what are the implications of each view for society In this important study a noted developmental psychologist contributes to this debate by confronting the difficult issue of doctrines of human development and the consequences for society of deriving political programs and public policy from them Beginning with the premise that scientific ideas are not neutral but can be used for either good or evil Richard Lerner considers the recent history of one such idea biological determinism which at times has had the backing of respected scientists intellectuals and political leaders During this century biological determinism has been coupled with political philosophies that hold that some people are inherently better than others This has meant that certain groups of people Jews Blacks Native Americans women have been stigmatized because of supposedly innate even biological differences with sometimes disastrous consequences The most notorious instance was Nazi Germany where racial science given legitimacy by the scientific community became a cornerstone of the Nazi Final Solution Meanwhile theories of biological determinism continue to find adherents within the scientific community Konrad Lorenz who was awarded a Nobel Prize in 1973 was a critical figure in the development of the most recent manifestation of biological determinism sociobiology Lerner examines the work of Lorenz and current sociobiologists and the implications of their claims for modern society He fears that biological determinism may again be co opted to serve the political agenda of today s reactionary politicians In fact Lerner notes sociobiologists have had to face the fact that organizations such as the fascist National Front party in Britain and its counterparts in France and the United States have selectively seized upon sociobiology to fuel their notions of genetically superior and inferior races

Eugenics and Protestant Social Reform Dennis Durst, 2017-06-06 The eugenics movement prior to the Second World War gave voice to the desire of many social reformers to promote good births and prevent bad births Two sources of cultural authority in this period science and religion often found common cause in the promotion of eugenics The rhetoric of biology and theology blended in strange ways through a common framework known as degeneration theory Degeneration a core concept of the eugenics movement served as a key conceptual nexus between theological and scientific reflection on heredity among Protestant intellectuals and social reformers in the late nineteenth century and the early twentieth century Elite efforts at social control of the allegedly unfit took the form of negative eugenics This included marriage restrictions and even

sterilization for many who were identified as having a suspect heredity Speculations on heredity were deployed in identifying the feeble minded hereditary criminals hereditary alcoholics and racial minorities as presumed hindrances to the progress of civilization A few social reformers trained in biology anthropology criminology and theology eventually raised objections to the eugenics movement Still many thousands of citizens on the margins were labeled as defectives and suffered human rights violations during this turbulent time of social change      *Subject Headings Used in the Dictionary Catalogs of the Library of Congress* Library of Congress, Library of Congress.
