Layer--Diagnostics Truck Bus Control and Communications Network Committee, 2006 The SAE J1939 series of recommended practices are intended for light and heavy duty vehicle uses on or off road as well as appropriate stationary applications which use vehicle derived components e.g. generator sets. Vehicles of interest include but are not limited to on and off highway trucks and their trailers, construction equipment and agriculture equipment and implements. The purpose of these documents is to provide an open interconnect system for on board electronic systems. It is the intention of these documents to allow electronic devices to communicate with each other by providing a standard architecture. J1939-73 identifies the diagnostic connector to be used for the vehicle service tool interface and defines messages to accomplish diagnostic services. California regulated OBD II requirements are satisfied with a subset of the specified connector and the defined messages. Diagnostic messages (DMs) provide the utility needed when the vehicle is being repaired. Diagnostic messages are also used during vehicle operation by the networked electronic control modules to allow them to report diagnostic information and self compensate as appropriate based on information received. Diagnostic messages include services such as periodically broadcasting active diagnostic trouble codes, identifying operator diagnostic lamp status, reading or clearing diagnostic trouble codes, reading or writing control module memory, providing a security function, stopping starting message broadcasts, reporting diagnostic readiness, monitoring engine parametric data, etc. This SAE Recommended Practice has been updated to support manufacturers' new requirements and new On Board Diagnostic (OBD) regulatory requirements for light duty, medium duty and heavy duty vehicles. These cover the needs of US EPA, US CARB, EU and World Wide Harmonization of OBD. The following updates made: APPENDIX G listing non OBD fault management narratives: DM22 Individual Clear/Reset of Active and Previously Active DTC, DM23 Previously Active Emission Related Faults, DM24 SPN Support, DM25 Expanded Freeze Frame and DM26 Diagnostic Readiness. 3. a revised definition for DM6 and updates to the DM1 for lamp flashing and a fixed 1 second update rate. DM27 All Pending DTCs, DM28 Permanent DTCs, DM29 Regulated DTC Counts, DM30 Scaled Test Results, DM31 DTC to Lamp Association, DM32 through DM52 and the addition of 2 new FMIs: FMI 20 Data Drifted High and FMI21 Data Drifted Low.

- a) Diagnostic Trouble Code format
- b) A description of the standardized set of Diagnostic Trouble Codes and descriptions contained in SAE J2012-DA.
- The two most significant bytes of a DTC may be decoded according to two different lists: DTC Format Identifier 0x00 and 0x04.
- c) A description of the standardized set of Diagnostic Trouble Codes subtypes known as Failure Types contained in SAE J2012-DA.

DA applies only when three byte DTCs are used. SAE J2012 is being republished with

no appendices to complement the SAE J2012 DA document that is now available The prior version of SAE J2012 was technically equivalent to ISO 15031 6 2005 The ISO document was subsequently edited and published as an International Standard ISO 15031 6 2010 including minor editorial changes This version of SAE J2012 includes all of the editorial changes that were included in the published version of the ISO document This version is updated to include the latest standardized fault structures application information and references to SAE J2012 DA In this update the standardized DTC and FTB lists are published only in SAE J2012 DA
