Martin, Michael J. Fuller. Professional automobile racing has always been dominated by sanctioning bodies whose main goal was to ensure competition. That has meant seeing that cars are well matched in body shape or chassis/engine combinations or engine size. But what

about an all out competition in which one team's idea of the fastest race car could be pitted against another's regardless of mechanical parity. This was what the International Motor Sports Association's IMSA Grand Touring Prototypes GTP race series was about. The Series ran from 1981 to 1993 and it was one of the most exhilarating racing experiences of all time. This book is the first to profile the amazing machines that resulted from the GTP's flat out competition among different and passionate ideas about what might be the fastest way around a track: the V-12 with its better ground effect tunnels but higher center of gravity; CG the flat six with its low CG but severely restricted ground effect tunnels; and others that employed elaborate wings and air dams. Here are the people behind this engineering free for all: the culmination of almost a century of automobile racing experience. And here are eighteen of the most competitive vehicles they designed. Using photography, diagrams, drawings, and first person accounts from the men who built them, *Inside IMSA's Legendary GTP Race Cars* offers a detailed look at the technology that drove some of the world's most exciting race cars, the likes of which may never be seen again.
