Abstract

Managerial Accounting is the branch of accounting that supports company management in planning, decision making, control and analysis. Effective use of this tool by operational management will ensure profitable growth and business optimization. For making business decisions, business owners or managers need financial and economic information relevant and structured according to their needs and analysis of information resources and business results. But financial statements provided by accounting professionals are hard to be understood, as economic content, and are insufficient for understanding the sources of income and loss of business or to identify ways to stabilize financial and economic optimization of business. It is therefore, necessary to develop managerial accounting business, which means: developing a system for recording financial and non-financial information according to the needs of business management, to monitor sources of income and losses of the business, developing initial reports, analyzes and dashboards on revenues and costs, debts and liabilities, receipts and disbursements, funding needs and sources of business; continuous adaptation of management.

1. Introduction - What is management accounting?

National Association of Accountants of the United States issued its first definition in 1981 with the document entitled Defining Management Accounting, which management accounting defined as: "... The process of identifying, measuring, accumulation, analysis, preparation, interpretation, and communication of financial information used by management to plan, evaluate, and control organization and ensure proper use and management responsibility resources. Management Accounting also includes the preparation of financial reports for non-management groups such as shareholders, creditors, regulatory agencies and tax authorities".

Therefore, managerial accounting is concerned with providing information to managers. People are within an organization, leading and controlling its operations. In contrast, financial accounting concerns the provision of information to shareholders, creditors, and those who are outside, or other organizations.

Still, financial accounting and managerial accounting are providing the most important information for business.

In business management, but requires management accounting information. Every organization which are large or small – as managers. Someone must be responsible for developing plans, organizing, resources, and personnel
