## **Maneb Jc Results 2013:**

**Drug Repositioning** Joel Dudley, Laura Berliocchi, 2017-07-14 Nervous system diseases represent a major health concern worldwide. Although important financial and professional investment, their etiology and pathophysiology still remain mostly elusive. Moreover, the clinical need of disease-modifying therapies is still unmet. In the last decades, traditional R D has failed in identifying new effective therapies in many medical areas, and drug repositioning has recently emerged as a promising alternative strategy to de novo drug discovery to improve and accelerate therapeutic development. For the first time, *Drug Repositioning: Approaches and Applications for Neurotherapeutics* reviews history and advances in drug repositioning with a special focus on therapeutics for nervous system diseases. International experts from Academia, Industry, and Non-profit organisations will provide different views on drug repositioning advantages, challenges, and specific applications which will be covered for nervous system diseases including Alzheimer's, Parkinson's, Huntington's diseases, Amyotrophic Lateral Sclerosis, Spinal Muscular Atrophy, ischemic stroke, and psychiatric disorders. This book provides a balanced overview and synthesis of drug repositioning concept, methods, and applications for neurotherapeutics. It represents a valuable resource for students, scientists, and clinicians working in academic settings, industry, and government agencies within the fields of neuroscience, pharmacology, neurology, pharmaceutical sciences, drug discovery, and development.

**Phytochemistry of *Withania somnifera*** Brijesh Kumar, Vikas Bajpai, Vikaskumar Gond, Surabhi Tiwari, K. P. Madhusudanan, 2021-11-11 *Withania* is a genus of the nightshade family of flowering plants distributed in the subtropical regions from the Mediterranean to South East Asia. Only two species, *W. somnifera* and *W. coagulans*, are found in India. The most common species is *W. somnifera* WS, which occurs naturally in the subtropical regions from the Mediterranean through Africa to the Middle East, the Indian Continent, Sri Lanka, South East Asia, subtropical America, and Australia. It is a perennial shrub that grows to 75 cm–75 m tall with tomentose branches, oval yellowish-green leaves, orange-red berries, and a papery calyx, and it survives harsher climatic conditions. In Ayurveda, it is believed that plants which survive harsh conditions have strong healing and tonification properties. The main bioactive phytoconstituents of WS are withanolides, steroidal lactones, alkaloids, flavonoids, sterols, phenolics, and others. Among the various withanolides, withanolide A, withaferin A, withanone, and withanolide D are the most abundant, having various activities. WS is a wonder herb with a broad spectrum of pharmacological properties such as antioxidant, antidepressant, aphrodisiac, antiulcerogenic, antivenom, anti-inflammatory, antiarthritic, anticancer, antiparasitic, antimicrobial, anticancerous, antidiabetic, antitumor, hemopoietic, neuroregenerative, immunomodulatory, cardioprotective, radio-sensitizing, rejuvenating, antistress, sedative, hypoglycemic, thyroprotective, adaptogenic, antispasmodic, immunomodulatory, immunostimulant, and antiaging properties. The simultaneous quantitative analysis of six major bioactive withanolides in five varieties of WS and in different plant parts (root, stem, and leaf) of WS was accomplished. This method is also applicable to control the quality of commercially formulated products which contain WS.

bioactive compounds Results indicated the WS variety NMITLI 135 showed the maximum abundance of withanolides at pH 8.5 EC 0.5 dS m<sup>-1</sup> ESP 13 in sodic soil Our results showed this readily available rapid and reliable method is suitable for the routine analysis and effective quality control of raw materials and finished products

**FEATURES** Presents a collection of Ayurvedic features and scientific analytical and pharmacological evidence of important medicinal plants of *Withania somnifera* Useful for natural product researchers faculty students and herbal product manufacturers Uses advanced hyphenated techniques for assessing phytoconstituents

**and Pesticides** Great Britain: Parliament: House of Commons: Environmental Audit Committee, 2013-04-05 If farmers had to pollinate fruit and vegetables without the help of insects it would cost hundreds of millions of pounds and we would all be stung by rising food prices Defra Ministers however have refused to back EU efforts to protect pollinators Disease habitat loss and climate change can all affect insect populations but a growing body of research suggests that neonicotinoids are having an especially damaging impact on pollinators The weight of scientific evidence now warrants precautionary action so the Committee is calling for a moratorium on pesticides linked to bee decline to be introduced by 1 January next year An EU wide moratorium on the use of imidacloprid clothianidin and TMX on crops attractive to bees following a recent risk warning from the European Food Safety Authority has also been proposed Many of the UK's largest garden retailers have voluntarily withdrawn non professional plant protection products that contain neonicotinoids A full ban on the sale of neonicotinoids for public domestic use which could create an urban safe haven for pollinators is recommended The pesticide industry must

open itself to greater academic scrutiny if it wants to justify its continued opposition to the precautionary protection of pollinators The Government s National Action Plan for the Sustainable Use of Pesticides published earlier this year was a missed opportunity according to the Committee Clearer targets are needed to reduce reliance on pesticides as far as possible And Integrated Pest Management which emphasises alternatives to pesticides but does not preclude their use should be made the central principle of the plan
