Research for Educational Change Jill Adler, Anna Sfard, 2016-06-17 *Research for Educational Change* presents ways in which educational research can fulfil its commitments to educational practice Focussing its discussion within the context of mathematics education it argues that while research generated insights can have beneficial effects on learning and teaching the question of how these effects are

to be generated and sustained is far from evident The question of how to turn research into educational improvement is discussed here in the context of learning and teaching hindered by poverty and social injustice In the first part of the book four teams of researchers use different methodologies while analysing the same corpus of data collected in a South African mathematics classroom In the second part each of these teams makes a specific proposal about what can be done and how so that its research generated insights have a tangible beneficial impact on what is happening in mathematical classrooms Combining two discourses that of researchers speaking to one another and that of researchers communicating their insights to those responsible for educational practice the book deals with the perennial question of communication between those who study educational processes and those who are directly responsible for teacher education educational research and classroom practices This book will be key reading for postgraduates researchers and academics in education and particularly in the areas of mathematics education education research teacher education and classroom practice It will also appeal to teacher educators practitioners and undergraduate students interested in educational research

Problem Solving in the Mathematics

Classroom Ana Kuzle, Benjamin Rott, Tatjana Hodnik Cadez, 2016-06-30 Problem solving is a cornerstone of the school mathematics curricula in many countries as it is an essential part of mathematical knowledge and performance Implementation of problem solving in school mathematics is also important for meeting society's needs with respect to work school and life as well as for stimulating the interest and enthusiasm of students Countries such as Finland Germany Hungary and Slovenia have a long tradition of problem solving in school mathematics Each country has faced its own specific challenges when adopting problem solving as a constituent part of school mathematics But through this process they have gained experience and discovered chances for integrating problem solving into mathematics lessons The heart of achieving this mission lies in choosing good mathematical problems Good mathematical problems are those that are not too difficult and not too easy are interesting challenging and mathematically rich They should invite students to conjecture and to explore different strategies support extending their existing knowledge and allow for problem extension In this book the reader will find such rich mathematical problems targeting students at different school levels that can help cultivate a problem solving culture The book provides the coherence and direction from different perspectives that practitioners need when integrating problem solving into their teaching practices and using problem solving to teach mathematics We believe that the processes which accompany problem solving contribute to both the development of students mathematical reasoning and to the development of their sense of autonomy
