Natural Image Statistics Aapo Hyvärinen, Jarmo Hurri, Patrick O. Hoyer, 2009-04-21 Aims and Scope This book is both an introductory textbook and a research monograph on modeling the statistical structure of natural images In very simple terms natural images are photographs of the typical environment where we live In this book their statistical structure is described using a number of statistical models whose parameters are estimated from image samples Our main motivation for exploring natural image statistics is computational modeling of biological visual systems A theoretical framework which is gaining more and more support considers the properties of the visual system to be reflections of the statistical structure of natural images because of evolutionary adaptation processes Another motivation for natural image statistics research is in computer science and engineering where it helps in development of better image processing and computer vision methods While research on natural image statistics has been growing rapidly since the mid 1990s no attempt has been made to cover the field in a single book providing a unified view of the different models and approaches This book attempts to do just that Furthermore our aim is to provide an accessible introduction to the field for students in related disciplines
