Microbial Applications Vol.2 Vipin Chandra Kalia, 2017-04-17 This contributed volume provides insights into multiple applications using microbes to promote productivity in agriculture to produce biochemicals or to respond to challenges in biomedicine. It highlights the microbial production of nanocompounds with medical functionality alongside new antimycobacterial strategies and introduces plant growth promoting Rhizobacteria as well as the correlation between biofilm formation and crop productivity. Further, the authors illustrate the green synthesis of biochemical compounds such as hydroxamic acid or biosurfactants using microbial and fungal enzymes. It inspires young researchers and experienced scientists in the field of microbiology to explore the combined use of green and red biotechnology for industrial purposes, which will be one of the central topics for future generations.
