iNetSec 2009 - Open Research Problems in Network Security Jan Camenisch, Dogan Kesdogan, 2009-11-02 The working group WG 11.4 of IFIP ran an iNetSec conference a few times in the past sometimes together with IFIP security conference sometimes as a stand alone workshop with a program selected from peer reviewed submissions When we were elected to chair WG 11.4 we asked ourselves whether the security and also the computer science community at large benefits from this workshop In particular as there are many too many security conferences it has become difficult to keep up with the field After having talked to many colleagues far too many to list all of them here we decided to try a different kind of workshop one where people would attend to discuss open research topics in our field as typically only happens during the coffee breaks of ordinary conferences To enable this we called for abstracts of 2 pages where the authors outline the open problems that they would like to discuss at the workshop the intent being that the author would be given 15 minutes to present the topic and another 15 minutes for discussion These abstracts were then read by all members of the Program Committee and ranked by them according to whether they thought this would lead to an interesting talk and discussion We then simply selected the abstracts that got the best rankings We were happy to see this result in many really interesting talks and discussions in the course of the workshop Of course these lively and direct discussions are almost impossible to achieve in a printed text Still we asked the authors to distill the essence of these discussions into full papers The results are in your hands

Security and Usability Lorrie Faith Cranor, Simson Garfinkel, 2005-08-25 Human factors and usability issues have traditionally played a limited role in security research and secure systems development Security experts have largely ignored usability issues both because they often failed to recognize the importance of human factors and because they lacked the expertise to address them But there is a growing recognition that today s security problems can be solved only by addressing issues of usability and human factors Increasingly well publicized security breaches are attributed to human errors that might have been prevented through more usable software Indeed the world s future cyber security depends upon the deployment of security technology that can be broadly used by untrained computer users Still many people believe there is an inherent tradeoff between computer security and usability It s true that a computer without passwords is usable but not very secure A computer that makes you authenticate every five minutes with a password and a fresh drop of blood might be very secure but nobody would use it Clearly people need computers and if they can t use one that s secure they ll use one that isn t Unfortunately unsecured systems aren t usable for long either They get hacked compromised and otherwise rendered useless There is increasing agreement that we need to design secure systems that people can actually use but less agreement about how to reach this goal Security Usability is the first book length work describing the current state of the art in this emerging field Edited by security experts Dr Lorrie Faith Cranor and Dr Simson Garfinkel and authored by cutting edge security and human computerinteraction HCI researchers world wide this volume is expected to become both a classic reference and an inspiration for future research Security Usability groups 34 essays into six parts Realigning Usability and Security with careful attention to user centered design principles security and usability can be synergistic Authentication Mechanisms techniques for identifying and authenticating computer users Secure Systems how system software can deliver or destroy a secure user experience Privacy and Anonymity Systems methods for allowing people to control the release of personal information Commercializing Usability The Vendor Perspective specific experiences of security and software vendors e g IBM Microsoft Lotus Firefox and Zone Labs in addressing usability The Classics groundbreaking papers that sparked the field of security and usability This book is expected to start an avalanche of discussion new ideas and further advances in this important field

Interfaces between Science and Society Ângela Guimarães Pereira,Sofia Guedes Vaz,Sylvia Tognetti,2017-09-08 The project of science has been to provide answers to questions about the world and how it works Often this lofty role has been characterised by a narrow and dogmatic scientific training an unwillingness to communicate to differing stakeholder needs a refusal to accept and to manage uncertainty complexity and value commitments and the reduction of knowledge assessment

to colleague peer review on narrowly technical issues Times have changed As the world faces increasingly disparate challenges science is subjected to increasingly vehement demands from a society calling for transparency openness and public participation in science policy Science is going through an evolutionary process Perhaps the most painful process it has ever encountered Research on the interfaces between science and society is a burgeoning area A new conception of knowledge now appears to be emerging based on the awareness of complexity uncertainty and a plurality of legitimate perspectives and interests Democracy is extending into the previously quite exclusive scientific realm and science must now submit to public scrutiny and participation in the governance of knowledge This book provides much needed reflections on the methods and tools for knowledge quality assurance particularly on its inputs to extended policy and decision making processes The overall aim is to improve the relationship between science and society The discussion involves six themes communicating between plural perspectives accepting and learning how to manage uncertainty complexity and value commitments acknowledging new conceptions of knowledge implementing transparency openness and participation in science policy valuing community based research and exploring how new ICT can support inclusive governance Taken together these themes provide both a framework and vision on how to conceive discuss and evaluate the changes that are occurring The chapters cover theory practice approaches experiences ideas and suggestions for a move beyond talking the talk to walking the walk Science and policy interfaces are dynamic processes needing to permanently redefine themselves and their roles This book contributes to the enrichment and deepening of our understanding of these important new trends in the social relations of science which are fundamental to our understanding of the prospects for further progress The book will be essential reading for scientists policy makers managers and the public Windows Vista William R.
