

# DIRECTIONAL HYPOTHESIS

A directional hypothesis is a type of research hypothesis that predicts the direction of the relationship or difference between variables.

## OVERVIEW

A directional hypothesis specifically states the expected outcome or effect in a particular direction. Unlike a non-directional hypothesis, which simply states that there will be a relationship or difference, a directional hypothesis provides a more precise expectation.

The direction can be positive (an increase or positive correlation) or negative (a decrease).

## EXAMPLES

- **Study Time and Grades:**  
Increasing the amount of study time is expected to improve test scores among students.
- **Sunlight and Plant Growth:**  
Exposing plants to more sunlight is hypothesized to promote their growth and development.
