*Expertise* Jessica Gerrard, Jessica Holloway, 2023-01-26 This book offers an important and timely critique of expertise showing how it is a keyword shaped by social historical and political debates about what counts as knowledge and truth and who counts as experts Using teacher expertise as an illustrative case Jessica Gerrard and Jessica Holloway reflect on recent events including COVID 19 and the climate crisis to examine how expertise is never neutral objective or fixed They argue that getting political is not just an inevitable part of teacher expertise but a necessary basis of any claim to it Across the chapters *Expertise* explores how expertise is socially constructed in relation to governance uses of data and evidence understandings of ignorance and the unknown and ultimately power Using contemporary and historical examples from international contexts the authors address the political positioning of expertise and how this creates boundaries between who is an expert and who is not and what is and is not expertise Gerrard and Holloway argue that ongoing policy

Schneider,2014-04-01 Corporate reform is not reform at all Instead it is the systematic destruction of the foundational American institution of public education The primary motivation behind this destruction is greed Public education in America is worth almost a trillion dollars a year Whereas American public education is a democratic institution its destruction is being choreographed by a few wealthy well positioned individuals and organizations This book investigates and exposes the handful of people and institutions that are often working together to become the driving force behind destroying the community public school

**Making College Work** Harry J. Holzer,Sandy Baum,2017-08-15 Practical solutions for improving higher education opportunities for disadvantaged students Too many disadvantaged college students in America do not complete their coursework or receive any college credential while others earn degrees or certificates with little labor market value Large numbers of these students also struggle to pay for college and some incur debts that they have difficulty repaying The authors provide a new review of the causes of these problems and offer promising policy solutions The circumstances affecting disadvantaged students stem both from issues on the individual side such as weak academic preparation and financial pressures and from institutional failures Low income students disproportionately attend schools that are underfunded and have weak performance incentives contributing to unsatisfactory outcomes for many students Some solutions including better financial aid or academic supports target individual students Other solutions such as stronger linkages between coursework and the labor market and more structured paths through the curriculum are aimed at institutional reforms All students and particularly those from disadvantaged backgrounds also need better and varied pathways both to college and directly to the job market beginning in high school We can improve college outcomes but must also acknowledge that we must make hard choices and face difficult tradeoffs in the process While no single policy is guaranteed to greatly improve college and career outcomes implementing a number of evidence based policies and programs

together has the potential to improve these outcomes substantially

**Predicting FCAT Science Scores 2007-08. Research Brief** Terry Froman, Vilma Rubiera, 2007 Although students have been taking the Florida Comprehensive Assessment Test FCAT Science test for a few years the State included the performance on the Science test in the school grade calculations for the first time in 2006-07 Although no official guidelines exist presently the Science scores may also be incorporated in the NCLB Adequately Yearly Progress requirements in the near future With the growing importance of the Science test it becomes increasingly desirable to have some way of predicting the performance of students In other FCAT testing areas prediction

formulas and cutoff scores for success have been developed by this office and made available to schools for several years. However, because the Science test is relatively new and because it is administered in only Grades 5, 8, and 11, prediction for this test must proceed along different lines. This paper presents the results of an analysis directed toward predicting students' Science scores based on their performance on the FCAT Mathematics test of the previous year.
