

Introduction

1.1 Purpose

This document describes the various functions of our project. The actual design of the various modules and components of **Student Information System** is described in this document, which takes care of various functionalities that our project aims to achieve and for determining the operating characteristics of the system.

1.2 Product Scope

Student Information System (SIS) is a web-based application for students, faculty, academic staff and parents who want to get and retrieve student's whole information instantly via internet. The major benefit of this web portal is to store the students information at one place (like SERVER) and it can be accessed via online interaction. The SIS web portal is to replace the old and traditional file(paper work) storing process. Instead of tedious paper work, students will be able to submit required information electronically, and the departments will be able to evaluate the submissions with a much quicker turnaround.

Critical Success Factors of Offshore Software Development Projects Martin Wiener, 2007-12-10 Why do projects succeed or fail Can managers influence the outcome of a project Are there core indicators that are extremely important in reaching targeted goals values and expectations Nearly every manager responsible for a project has to deal with such questions sooner or later This is especially the case for projects that are innovative to an organization With the emergence of global communication technologies and driven by the desire of corporations to take advantage of the lower costs of production and skilled labor in developing countries the movement in German speaking countries to export work offshore has experienced a notable rise in popularity The offshoring of information technology and software development has spawned an entire industry Still many offshore projects do not live up to their expectations This book offers an enlightening and detailed analysis of the phenomenon of offshoring software development and its critical success factors The critical success factor approach allows management to harness the organization's resources on those issues that will make a difference It will help to focus attention on major concerns and guide businesses in creating and measuring success

Intelligent Spatial Decision Support Systems
 Yee Leung, 2012-12-06 In the past half century we have experienced two major waves of methodological development in the study of human behavior in space and time The first wave was the well known quantitative revolution which propelled geography from a mainly descriptive discipline to a scientific discipline using formalism such as probability statistics and a large number of mathematical methods for analyzing spatial structures and processes under certainty and uncertainty The second wave is the recent advancement of geographical information systems which equips geographers with automation in the storage retrieval analysis and display of data Both developments have significant impacts on geographical

studies in general and solutions to real life spatio temporal problems in particular They have found applications in urban and regional planning automated mapping and facilities management transportation planning and management as well as environmental planning and management to name but a few examples Both developments have one thing in common They one way or the other use computer to process and analyze data However not until recently there has been very little interaction between the two Quantitative models have largely been developed independent of the underlying data models and structures representing the spatial phenomena or processes under study Display of analysis results has been primitive in terms of the utilization of computer graphic technologies Formal models in addition to their technical difficulties have poor capability in communication with users Geographical information systems on the other hand have originally been developed with a slight intention to entertain powerful analytical models
