provides a unique overview of research methods over the past 25 years assessing critical loads and temporal effects of the deposition of air pollutants. It includes critical load methods and applications addressing acidification, eutrophication and heavy metal pollution of terrestrial and aquatic ecosystems. Applications include examples for each air pollution threat both at local and regional scale including Europe, Asia, Canada and the US. The book starts with background information on the effects of the deposition of sulphur, nitrogen and heavy metals and geochemical and biological indicators for risk assessments. The use of those indicators is then illustrated in the assessment of critical loads and their exceedances and in the temporal assessment of air pollution risks. It also includes the most recent developments of assessing critical loads and current and future risks of soil and water chemistry and biodiversity under climate change with a special focus on nitrogen. The book thus provides a complete overview of the knowledge that is currently used for the scientific support of policies in the field of air pollution control to protect ecosystem services. **Classed Subject Catalog** Engineering Societies Library, 1967

Proteins in Solution and at Interfaces Juan M. Ruso, Ángel Piñeiro, 2013-01-31 Explores new applications emerging from our latest understanding of proteins in solution and at interfaces. Proteins in solution and at interfaces increasingly serve as the starting point for exciting new applications from biomimetic materials to nanoparticle patterning. This book surveys the state of the science in the field, offering investigators a current understanding of the characteristics of proteins in solution and at interfaces as well as the techniques used to study these characteristics. Moreover, the authors explore many of the new and emerging applications that have resulted from the most recent studies. Topics include protein and protein aggregate structure, computational and experimental techniques to study protein structure, aggregation and adsorption of proteins in non-standard conditions and applications in biotechnology. *Proteins in Solution and at Interfaces* is divided into two parts. Part One introduces concepts as well as theoretical and experimental techniques that are used to study protein systems including

X ray crystallography nuclear magnetic resonance small angle scattering and spectroscopic methods Part Two examines current and emerging applications including nanomaterials natural fibrous proteins and biomolecular thermodynamics The book s twenty three chapters have been contributed by leading experts in the field These contributions are based on a thorough review of the latest peer reviewed findings as well as the authors own research experience Chapters begin with a discussion of core concepts and then gradually build in complexity concluding with a forecast of future developments Readers will not only gain a current understanding of proteins in solution and at interfaces but also will discover how theoretical and technical developments in the field can be translated into new applications in material design genetic engineering personalized medicine drug delivery biosensors and biotechnology *Publications of Los Alamos Research* Los Alamos National Laboratory,1983
