A. Tenreiro Machado,Gabor Stepan,2020-01-29 This first of three volumes from the inaugural NODYCON held at the University of Rome in February of 2019 presents papers devoted to Nonlinear Dynamics of Structures Systems and Devices The collection features both well established streams of research as well as novel areas and emerging fields of investigation Topics in Volume I include multi scale dynamics coexistence of multiple time space scales large system dynamics dynamics of structures industrial machines equipment facilities e.g. cable transportation systems suspension bridges cranes vehicles nonlinear interactions parametric vibrations with single multi frequency excitations multiple external and autoparametric resonances in multi dof systems nonlinear system identification parametric nonparametric identification data driven identification experimental dynamics benchmark experiments experimental methods instrumentation techniques measurements in harsh environments experimental validation of nonlinear models wave propagation solitons kinks breathers solution methods for pdes Lie groups Hirota's method perturbation methods etc nonlinear waves in media granular materials porous materials materials with memory composite structures multi layer functionally graded thermal loading fluid structure interaction nonsmooth and retarded dynamics systems with impacts free play stick slip friction hysteresis nonlinear systems with time and/or space delays stability of delay differential equations differential algebraic equations space time reduced order modeling enhanced discretization methods center manifold reduction nonlinear normal modes normal forms fractional order systems computational techniques efficient algorithms use of symbolic manipulators integration of symbolic manipulation and numerical methods use of parallel processors and multibody dynamics rigid and flexible multibody system dynamics impact and contact mechanics tire modeling railroad vehicle dynamics computational multibody dynamics **Multi-body Dynamic Modeling of Multi-legged Robots** Abhijit Mahapatra,Shibendu Shekhar Roy,Dilip Kumar Pratihar,2020-02-27 This book describes the

development of an integrated approach for generating the path and gait of realistic hexapod robotic systems It discusses in detail locomotion with straight ahead crab and turning motion capabilities in varying terrains like sloping surfaces staircases and various user defined rough terrains It also presents computer simulations and validation using Virtual Prototyping VP tools and real world experiments The book also explores improving solutions by applying the developed nonlinear constrained inverse dynamics model of the system formulated as a coupled dynamical problem based on the Newton Euler NE approach and taking into account realistic environmental conditions The approach is developed on the basis of rigid multi body modelling and the concept that there is no change in the configuration of the system in the short time span of collisions

Software Engineering for Experimental Robotics Davide Brugali,2007-02-15 This book reports on the concepts and ideas discussed at the well attended ICRA2005 Workshop on Principles and Practice of Software Development in Robotics held in Barcelona Spain April 18 2005 It collects contributions that describe the state of the art in software development for the Robotics domain It also reports a number of practical applications to real systems and discuss possible future developments
