Form 4 Klb Biology:

A First Course in Systems Biology Eberhard O. Voit, 2012-03-28 A First Course in Systems Biology is a textbook designed for advanced undergraduate and graduate students. Its main focus is the development of computational models and their applications to diverse biological systems. Because the biological sciences have become so complex that no individual can acquire complete knowledge in any given area of specialization, the education of future systems biologists must instead develop a student's ability to retrieve, reformat, merge, and interpret complex biological information. This book provides the reader with the background and mastery of methods to execute standard systems biology tasks, understand the modern literature, and launch into specialized courses or projects that address biological questions using theoretical and computational means. The format is a combination of instructional text and references to primary literature, complemented by sets of small-scale exercises that enable hands-on experience and larger-scale, often open-ended questions for further reflection.

Sossin, 2021-04-15 The Oxford Handbook of Neuronal Protein Synthesis reviews the mechanisms of translational control used by the nervous system as well as how nervous system functions such as plasticity and homeostasis depend on accurate translational control. The handbook extensively covers how dysregulation of protein synthesis can manifest itself in many distinct pathological processes, including neurodevelopmental, neuropsychiatric, and neurodegenerative diseases.
